Cairo Calls It 'Rejection'

Israeli Answer Is 'Favorable'

To Egyptian Peace-Talk Bid

U.S. Drops Use of Defoliants To Destroy Crops in Vietnam

SAIGON, Feb. 21 (UPI).—The U.S. Command announced yesterday that the use of defoliants to destroy crops and airplane spray defoliation operations has been suspended on the orders of the U.S. military commander, Gen. Creighton W. Abrams, and U.S. Annhassador Elisworth C. Bunker. Disclosure of the suspension was made in a two-paragraph announcement at the end of the command's daily briefing sheet

for news correspondents. The announcement did not give the date the suspension was effective, but spokesmen said that all flights of C-123 spray planes had ended by Jan. 27. In the future, the announcement said, spraying will only be done around alied bases where it is necessary to remove possible cover for Communist troops and in "remote areas away from

heavily populated areas." Yesterday's announcement followed a prohibition last year on the use of a defoliant known as "orange" following tests which indicated that large oral doses given to laboratory animals were followed by a larger than normal number of birth defects

spray planes, which could cover dozens of square miles in a single mission. Following the ban, the C-123 program was cut back by about 90 percent, spokesmen said, with the remaining flights using two other defoliants, known as "white" and "blue." Although the ban against "orange" resulted in a drastic cut in all defoliation operations, the program caused controversy last fall when it was discovered that some officers of the Americal Division in the northern sector of the country had ignored the ban and used "orange" in defoliation around some bases.

"Orange" was the defoliant most heavily used by the C-123

WASHINGTON, Feb. 21 (NYT).—Authoritative diplomatic sources point out a semantic complexity in the major diplomatic peace initiative that Egypt made to Ambassador Gunnar V. Jarring, the United States intermediary, last week. The sources said Friday that the Egyptian government had

Mideast Semantics Battle Possible

On Peace 'Treaty' or 'Agreement'

pledged its willingness to sign a binding peace agreement with Israel preferring to use the word agreement instead of the

High-level Western diplomats said that from the context of the Egyptian note, they saw no juridical difference between the two phrases, explaining that what the Egyptians had called a peace agreement others could cell a treaty. These diplomats said that the Egyptian note made it clear

that Cairo was prepared for the kind of binding contractual agreement which the United States has been promoting although the actual procedures for its signing were not spelled out.

In an interview published last Monday by Newsweek magazine, Egypt's President Anwar Sadat did not hesitate to refer to a treaty. He called the 1967 UN resolution on the Middle East—accepted by Egypt—an embryonic peace treaty." Later, when he was asked what the terms of a peace treaty should be, he defined them in some detail. But when the News-week interview was reprinted in the Cairo press, the "peace treaty" phrase was omitted.

Knowledgeable diplomats said that Cairo evidently preferred the phraseology that would least offend fellow Arabs and domestic Egyptian opinion.

In actual negotiations, however, either side could decide to make an issue of semantic differences for tactical purposes, especially if there were disagreement on more critical sub-

Nature Lovers in U.S. Force Army To Drop Plan to Freeze-Kill Birds

MILAN, Tenn., Feb. 21 (AP).—The U.S. Army is in retreat—put to flight by a bunch of bird lovers who were infuriated by reports that the Army was involved in a plan to massacre millions of blackbirds by freezing them to death.

If there was ever a plan to eradicate the three million to seven million blackbirds and starlings roosting at the Army

arsenal here, it has been abandoned.

According to the Department of the Interior, such a plan never existed. But there was a plan to kill about 20,000 of

the birds by freezing. Even that plan, which cannot be carried out without the Army's permission to use the arsenal as a test site, is in doubt, says Dr. John Senbert, director of hird-control methods for the

Department of the Interior. Dr. Scubert said that he could not say whether the Department of the Interior would pursue its plans. "With all the bad publicity the Army has had," he said, "I couldn't blame them if they did not go along with our plans."

Robert Boardman, public relations director for the National Andnbon Society in New York took a different view. Mr. Boardman said that his organization was "delighted" that the proposed test was revealed and added that his office handled between 200 and 300 telephone calls on the subject one day last week.

A spokesman for the Audubon Naturalist Society in Washington said that his office has also received numerous complaints

Russia Orders **Human-Rights Group Ended**

Founded by Sakharov, Includes Solzhenitsyn

MOSCOW, Feb. 21 (UPI).-The Committee on Human Rights founded by nuclear physicist Andrei D. Sakharov and supported by novelist Alexander Solzhenitsyn has been declared illegal and order ed to cease functioning, dissiden sources said today.

But they said there was a possibility the Moscow prosecutor

office might allow a compromise under which the committee could submit copies of its writings on Soviet law, society and hums rights to the authorities. The committee was founded las

November by Dr. Sakharov, the Einstein of Soviet physicists and one of the developers of the Soviet hydrogen bomb. Cofounders were physicists Valery N. Chalidze and Andrei N. Tverdokhlebov.

Its charter says the committee will work to "search for construc-tive ways of securing human rights in the Soviet Union, including research into Soviet law and uni-versal rights. It declares itself nonpolitical and patriotic. Price Night

Laos: The End of the Line

The proof of the Laotian "incursion" was always going to be in the results. If it worked as advertised, fine. If not, it would inevitably be on the President's head because, in the finest tradition of this war. he acted on his own, without warning, and with the familiar promises of glittering achievement readily at hand. That said, it needs to be added that there can be no comfort for the war critics in the grim dispatches from southern Laos, or in the word of new threats to the Laotian government in the north, or in the reports of new troubles for South Vietnamese forces in Cambodia, Contrary to the mean-minded assertion of Sen. Dole, the Republican party chairman, very few opponents of the war seriously want the Communists to win. And there would be nothing to be gained, in any case, by putting the administration under pressure to proceed from a failure of its Laotian enterprise to a fresh search for some other quick fix-some new "decisive act" or "bold stroke" or "Dien Bien Phu in reverse"; some illusory parting shot that will insure our safe and orderly disengagement from the

That has been our trouble all along: The hard sell which begets the new euphoria of the White House briefers and the Alson brothers, which is in turn the mother of hysteria among the critics—the talk of Laos as a "burial ground" for Vietnamization and of a sure road to ever-wider war. In the process all distinction is lost between what the President is trying to do and what his critics think will be the consequences of what he does. We can all speculate about the latter. But it is useful, now and again, to recall what the administration has actually done and what it actually says it intends to do. It has cut American casualties drastically, even when allowance is made for the Laotian helicopter losses; it has withdrawn nearly a quarter of a million U.S. troops; it is turning more and more of the fighting over to the South Vietnamese. These are facts, and they are not altered by the possibility of a setback for the South Vietnamese in Laos. What is more, they are facts with a certain momentum of their own which is going to have some bearing on what the administration is actually able to do by way of influencing the outcome of the war,

So we see no reason not to believe that. Secretary Rogers means it when he says that President Nixon's policy is "to withdraw troops from Indochina, South Vietnam particularly, in an orderly way, as soon as we can, consistent with the policy of this administration, consistent with the sacrifices. that this nation has made over the years. in a way that will not be a total repudiation of all our nation has stood for."

And we see no reason to doubt that Mr.

"We are going to continue that policy. We couldn't change that under any conditions. The imperatives are such that we have to continue that program, and we are going to continue it. . . All our planning is based on the withdrawal of our troops. . ."

In fact, President Nixon has been astonishingly consistent about his Vietnam policy. Though he did not, as he would have us believe, invent "Vletnamization" (in November. 1967, Gen. Westmoreland publicly outlined a detailed, four-phase plan under

which the United States would become "progressively superfluous"), Mr. Nixon was advocating that very course in his pitch to Republican convention delegates at Miami Beach in 1968. Since then he has publicly pledged the ultimate withdrawal of all American forces, including air and logistical, subject only to the time it would take to train the South Vietnamese; and he has expressed, also in public, his willingness to accept an outcome which could bring the Communists to power in Vietnam, so long as the South Vietnamese can reasonably be said to have been given a fair opportunity to work out their own destiny.

So we are not among those who think that the President secretly intends to "win," or believes deep down that the North Vietnamese can be bombed into submission, or means to maintain American forces in South Vietnam indefinitely. Our concern, rather, is not so much with the administration's ends as it is with the particular way it goes about achieving them. By this we do not mean the masterplan, although there is ample room for reservations about that. What is disturbing to us is the way this administration calculates the risks. That and the glib assurances; the stubborn refusal to prepare public opinion for the unforeseen consequences; the facile promises to "end the war" and secure a "just peace" when the very best that Vietnamizationor more properly, de-Americanization-can offer is our extrication from Vietnam. "Don't they know we're getting out," Secretary Rogers is said to exclaim in anguished tones to visitors, and our answer would have to be yes and no. Yes, in the sense that we accept the intent. But no, in the sense that all a bystander can "know" for certain is what has gone before: That every new initiative of ours has been met by some countermove or another on the part of the enemy; that the North Vietnamese have proved themselves almost infinitely resilient and resourceful; that the enemy is in a position to damage our interests in a rich variety of ways for which B-52s are not necessarily an effective remedy-by stepped-up terror. for example, or by merely lying low and buying time, or by a quick grab for all of Laos, or of Cambodia, or by a drive down through the DMZ.

And what if the South Vietnamese expeditionary force is badly chewed up in southern Laos? What are we then to make of the easy talk of turning points and decisive action and all the rest?

This, then, is why one must wish profoundly for success in Laos. But it does not follow that a failure in Laos would oblige us to proceed from the original rationale to new measures-to a new search for a quick fix. Somewhere in between euphoria and hysteria there is a better solution and it will have to begin with a reassessment of the mission charged subject the French brought -and of the risks. It will have to begin their total foreign military orders with an insistence-if not by the adminis- last year to well over \$1 billion. tration, then by Congress—that there is a limit to our capacity to dictate the destiny of South Vietnam; that there are more risks in reckless advocacy of "incursions" into North Vietnam than there are in proceeding with withdrawal and in winding up our role; that there is no quick fix. That Laos, . in short, is the end of the line.

THE WASHINGTON POST.

Regaining the Trade Initiative

The Mills bill, the most protectionist trade legislation since the disastrous Smoot-Hawley Act of 1920, was blocked in the last session of Congress by a determined group of liberal traders in the Senate, aided by the Senate logiam resulting from Sen. Long's folly in seeking to couple Social Security liberalization, welfare reform and trade.

Chairman Wilbur Mills of the House Ways and Means Committee has now reintroduced his bill, complete with import quotas on textiles, shoes and-via a trigger mechanism -a long list of other goods.

Aware of European warnings of "inevitable reprisals," Mr. Mills appears to lack ardor for his own measure. And the Nixon administration would prefer less protectionist legislation, although the President is still determined to make good on his commitment to the textile industry to restrict Japanese imports. The White House continues to see the Mills bill as a useful bargaining weapon in its effort—unsuccessful to date to get the Japanese to accept "voluntary" textile quotas.

It was Mr. Nixon's decision to seek legislated textile quotas that opened the Pandora's box for quota protection for other industries. The White House hopes to avoid a rerun of last year's flasco by making a deal with Japan that would eliminate compulsory textile quotas from the trade bill. Even

barring that, it hopes through Tariff Commission action to blunt the support of the shoe industry for import quotas.

Whatever the outcome of the moves, it is obvious that the American oil industry in- voive Mirage jets but some contends to cling to its highly restrictive import quotas, the steel industry to its voluntary quotas and the textile industry to its demands for one kind or the other. Other industries are bound to demand similar gentina for 106 Mirage Vs. protection unless the administration makes a real fight for liberal trade policies.

Tired of waiting for the administration to match its actions to its liberal trade rhetoric. three senators-Harris of Oklahoma, Javits of New York and Mondale of Minnesotaare planning to seize the initiative by introducing a trade bill of their own. Their bill would give the President authority to bargain for mutual reduction of both tariff and nontariff barriers; it would increase his ability to retaliate against unfair trade practices by others, and it would aim at building a more effective program of adjustment assistance for firms and workers hurt by rising imports.

Just as foreign governments helped to slow down the drive for American protectionism by threatening retaliation last year, they could now augment the effort for a renewed U.S. liberal trade initiative by showing their readiness to respond in kind,

THE NEW YORK TIMES.

In the International Edition

Seventy-Five Years Ago

February 22, 1896

Dissensions in the Cabinet and outside intrigues make it well nigh impossible for Signor Crispi to weather the storm that threatens to break at the opening of Parliament. Meanwhile, it looks as if the Italian forces were going to be surrounded by bordes of the Menelik. Truly a critical state of affairs.

Fifty Years Ago

February 22, 1921

WASHINGTON-Representative Nicholas Longworth has introduced a Bill for revision of the legislative law which provides a repeal of the excess profits, transportation and soft-drink taxes, and in their stead a flat 15 percent tax on the net income of all corporations. The repeal of these taxes will mean the loss of \$800,000,000 while the corporation tax will yield only \$450,000,000, but the author says that the difference will be made up through tariff in-CTERSES.

Arms and the Frenchman

By C. L. Sulzberger and three Mirage-IIIB jets to Pre-

PARIS-A certain American envoy to France, named Benjamin Franklin, used to say honesty was the best policy and this is what the French today assert with respect to their enormous arms trade with the rest of the world, a commerce escribed by rivals or disappointed clients as "war-mongering" or "outrageous." French arms policy may be cynical but it is not obscured

Paris, which has now replaced London as No. 3 armaments export capital (after Washington and Moscow) contends quite blandly that it sells weapons on a strictly business basis in the national interest, is no merchant of death and simply provides what others would provide if the French didn't offer better goods or better terms.

As a consequence of this straightforward approach Since January, 1969, sales have been arranged or negotiations be-

gun with no less than 26 countries. The two most contentious regions involved, politically speaking, are Latin America and South Africa, French arms salesmen, under their director Hughes de L'Estoile, have moved into the Latin American market previously regarded as Washington's exclusive bailiwick, thus clearly reducing dependence on the United States of several nations in the Monroe Doctrine

Some Clients

Recently agreements have been made or are under negotiation with Argentina, Brazil, Chile, Colombia, Ecuador, Guatemala, Panama, Peru and Venezuela. These mostly incern Fouga Magister trainers, AMX tanks, Alouette helicopters, gunboats and Exocet sea-to-sea missiles. The biggest single accord was arranged last year with Ar-

Effective intrusion into the Latin market has obvious political reperassions because of its heritage of anti-Yankee feeling and also because of the rising tide of revolutions stressing hostility to Washington. The only equally explosive ares of French arms penetration In 1969, Paris sold 42 Mirage-HIE 13 foreign lands.

toria. A new contract is being negotiated for 100 Mirage Milans. The French have sold helicopters and Panherd armored cars (both effective against guerrillas) and are developing their surface-to-surface Cactus guided missile in South Africa with Pretoria paying about

three fourths its cost. Astonishingly, this produces few complaints against Paris from the many black or pro-black African clients of France's armaments industry including Cameroun, Congo, Gabon, Ivory Coast, Kenya, Senegal, Algeria, Libya, Morocco and Tunisia. Indeed, the largest contract yet made by the manufacturers of the Mirage was for the sale of 110 of these remarkable jets to leftist, revolutionary Libya which violently dislikes South Africa.

Enraged Britain

This unembarrassed export to both sides of the African dispute enrages Britain, which keeps risking dissolution of the Commonwealth by angry black states every time limited military sales to Pretoria are mentioned

That liberal newspaper, the Guardian, reported recently:

"The extraordinary manner by which France has managed to carry on its arms sales to South Africa without major challenge was never more marked than when President Kaunda visited Paris last autumn after his first angry confrontation with Mr. Heath over the South African arms issue . . . "There is little doubt that France

stands ready to fill the gap if Britain were after all to decide against an arms deal with South Africa. Nevertheless President Kannda emerged from his session with Monsieur Pompidou mollified, and off the warpath against France." The only obviously political restriction on French arms salesmen has been vis-a-vis Israel, which bought and paid for 50 Mirage-Vs never licensed for export becauses of the later embargo on weapons sales to that little country. Aircraft manufacturers ultimately lost little by the boycott since the French Air Force itself has purchased only about 400 of

Nixon's Asia Policy Study in Contradiction

By James Reston

catch to this

He insists that the guys in the white hats keep control of the saloon before he leaves town. He wants a non-Communist bartender, and a non-Communist sheriff, and a secure non-Communist town before he rides away into the sunset of November, 1972. It is a logicalpersonal and political strategy, but in Asia, it is a military and geographical contradiction. Asia is not a frontier town, and the white hats are a very small minority.

Washington is deeply divided about all this, increasingly frustrated and cynical, because the President is emphasizing one thing and doing another. He is empha-sizing withdrawal of the American troops to keep the home front quies. and fighting in Laos to cripple the enemy and keep the Salgon front quiet, and the thing would probably work if the white hats were in the majority in that part of the world or if the President stayed around. It is his withdrawal and his faith in the minority in Salgon that is troubling and dividing Washington. In the short run, the strategy will probably work, but in the long run geography and the majority will probably prevail, and meanwhile, what will justify the bloodshed?

A. Choice

It is not possible to understand the honest differences here over the President's policy unless a dis-tinction is made between his dual aims of getting out and maintaining a non-Communist regime in Saigon. At some point he has to choose: He can stay in Indochins with his air power and prob- settle everything. The North Vicably prevail for a time against the namese, he said, "have to fight patient weight of China's 700 million people, a quarter of the human race, or he can withdraw the and [give upl their influence ex-American expeditionary force, but tending through Southeast ISiz." it is doubtful that he can do both.

Maybe he could do it long enough to hold the line through the Saigon election this autumn and the American presidential election of 1972, but the future order of the world is not going to depend on the reelection of Richard Nixon or Gen. Thieu and Air Vice-Murshal Ky. Either a non-Communist government in Saigon is vital to the interests of the United States or it isn't. If it is, we should stand and fight—not hold Thieu's coat or count on the CIA's mercenary namese that is tearing up this tribal warriors to fight in the hills, capital. This is a political city, or, if cutting the Ho Chi Minh and everybody understands the Trail is cutting the enemy's "life President's dilemma. In fact, most line," as Nixon calls it, leave the battle to the South Victnamese, and abandon them if they are

This is not to say that the Presi- Years. dent has a clear intention of making his military strategy fit his plicated than "backing out of the re-election problems in 1972. But seloon." The hills are full of black re-election problems in 1972. But he is a deeply political man and always there is a confusion between and they are still going to be political interest and the larger around long after Nixon has refired realities of world politics. No doubt to San Clemente.

WASHINGTON.-The latest of- he hopes that the success in the W ficial explanation of the Presi-dent's Indochina policy is that "he ly cut the Hanoi "life line" but the is backing out of the saloon with larger historical and geographical both guns firing," but there is a realities are against him.

Negotiation

There is something, not only illogical, but almost dishonorable in his present strategy. It, so the President implies, the invesion of Lucs is critical and may even be decisive in the war and "visal" to our interests, then one would have thought we should fight for it. If, as he emphasizes, the mais point of what he calls the Laos "incursion" is to "insure our withdrawsi, to reduce our casualties, and to shorten the war," then this can clearly be orgotiated with Hanol and the National Liberation

Hanol and the Viet Cong are not going to refuse to agree to the departure of the American troops.
If this is really the President's purpose, he can get the boys back home and end the casualties and shorten the war. He can negotiate this, he doesn't have to fight for it in Laos or anywhere else.

But this is clearly the purfling point. He must have another pur-pose, and the guess here is that his purpose is really to maintain a non-Communist regime in Saigra. Indeed this has been central to the struggle from the very beginning. There is a good argument for 11. but the thing should be stated plainly and clearly: Who will control Vietnam? The Communists or the non-Communiste? This is was: the battle is all about and at least it ought to be made clear.

Contradiction

Nixon presented the Lacs ad venture last week as if it would here or give up the struggle to conquer South Vietnam, Cambodia, But wby do they have to do so? They can withdraw and wait, while Nixon brings the boys back home. They have been fighting the Chinese, the French, the Japanese, and themselves for thousands of years, They can lose and retreat into the jungle and try again after Nixon has kept his promise to withdraw our men. After ail November, 1972, means nothing to them.

It is this contradiction of withdrawing American troops and leaving the battle to the South Vietpeople here understand his political strategy, and agree that he can probably hold the line with an power through the next couple of

hats in that part of the world,

The Light and the Heavy

By Joseph Alsop

hard to know what it may be, 40 percent of its men killed in Yet an old column by this reporter has just brought down the thunders of four admired colleagues—an honor indeed!

It would not be worth mentioning, except that it has a certain symbolic significance. Rightly or wrongly, after all, the United States by now has a heavy investment of namese war. What mainly matters. therefore, is what happens in Vietnam. But while Washington trivia gets so much attention, what is really happening in Vietnam is quite impossible to discover from each

morning's news. To make this contrast worse, what is happening in Vietnam grows daily more significant. It is a ten-to-one bet, for instance, that only a tiny minority of those who read these words will have grasped the fact that there is serious fighting going on in Cambodia. This is in the area of the Chup plantation and northwards.

The fact itself has been dimiy recorded, here and there. Yet neither the nature, nor the pur-poses, nor the meaning of the South Vietnamese offensive in this part of Cambodia have found their way into print.

The nature of the fighting is simple enough. The flamboyant but able Gen. Do Cao Tri is leading his South Vietnamese forces against the enemy, in what was supposed to be the new North Vietnamese fortress-base-area in Cambodia. With less than two South Vietnamese divisions, Gen. Tri has been taking on Hanoi's Pifth, Seventh

enemy units in South Vietnam: The grisly "body-counts" have

and Ninth Divisions which used

to be three of the most feared

The International Herald Tri nima melicomes letters from readers. Short letters have a better chance of being published. All letters are subject to condensation for space reasons Anonymous letters will not be considered for publication. Writers may request that their letters be signed only with initials, but preference will be given to those fully signed and

WASHINGTON.—If there is any already mounted to above 1,200 Gen. Hoang Phung Lam attain thing more trivial than yes. North Vietnamese soldiers. It is their ultimate objectives, they will terday's newspaper column, it is a simple rule that any unit having own a swathe of the trail-complex terday's newspaper. equivalent of two enemy regiments already crossed off the list—at least for the time being.

> If the Ho Chi Minh Trail complex is successfully cut in Laos, the "time being" is likely to be indefinitely long. Worse still, the enemy's rate of loss is currently running at an average of 100 men per day. And this is the proportional equivalent, for North Vietnam, of an American loss of 1,000 men per day. Meanwhile, Gen. Tri's losses have been painful but

This almost ignored Cambodian campaign therefore has very great potential meaning. If all goes well (and that is always a very big "if") the enemy's forces in Cambodia will be torn to ribbons, and their laboriously established new base areas will be knocked to smithereens. This can happen before the present dry season ends. Already, moreover, by their performance in the field, Gen. Tri's troops have strikingly proved the worth of President Nixon's scheme of Vietnamization.

Great Risk

As to the concurrent invasion of Laos, to cut the Ho Chi Minh Trail complex, it has caused more public turmoil than Gen. Tri's operation in Cambodia. But there has been an almost equal paucity of information about its nature and its meaning.

not be underrated, to begin with. like the silly business of alleget If the South Vietnamese under Panther genocide.

action is a unit effectively put out five miles deep. That means the of action itself. This means the equivalent of two South Vietnamese divisions holding a salient whose northern and southern flanks will each be thirty-five miles long-and in very rough, enemy-infested

The very fact that Gen. Creighton Abrams has been eager to mount such an operation speaks volumes about his confidence in Vietnamization, If the operation succeeds (and the "if" is again crucial) about 130,000 North Vietnamese troops and support per-sonnel will also be cut off to the south of the trail-cut, at any rate until the next dry season begins in December, 1971.

Proportionally, that means for Hanoi the equivalent for Washing-ton of 1,300,000 Americans left without supply, reinforcement and, in a good many cases, even without rations, for a period of ten months, Of the readers who have followed this report thus far, one wonders how many have previously been made aware of that remarkable fact, or of more than the tiniest proportion of the other foregoing

The world's first Stalinist, the Chinese political philosopher Lord Shang, remarked bleakly about 2,400 years ago, "If a state empha sizes the light and ignores the heavy, that state is doomed." The rule can one day apply to the trade of reporting facts if trivia slway gets most of the attention while serious facts are either downgradet or-actually misreported, as so ofter The Laos operation's risks should in Vietnam and also in other cases

Von Braun Charts Future of U.S. Space Program on Earth

By Johannes K. Engel

ENGEL: Dr. Von Braun, for the past 20 years you have seen space travel as the "great hope for humanity." You had hoped that embarking on the planetary trail would lead to a "technical conquest of the urge to make war" and bring "a new cosmic conscience" to mankind. Yet, as we enter the 70s, it seems that mankind is more preoccupied with the pollution of its environment than the conquest of space. NASA is facing drastic cuts, a curtailment of its program, and is having to dismiss people. Do you see your hopes dashed?

VON BRAUN: One can't think in terms of cost effectweness convinced that space travel will pay off on all its promises, even if these are momentarily overshadowed by other problems. From the outset, when the Apollo program was launched. it was clear that President Kennedy's pledge to the American people and the world was strictly limited to putting an American on the moon in the 60s. There was no suggestion of any sort of a follow-up program, and yet we are overwhelmingly occupied by just such programs President Nixon himself spelled out our targets for the period following the first moon landing: More lunar missions using the remaining Apollo launches, then building a space station for parking in an earth orbit. He also said that we shall be expected to continue exploring the planets and to make space travel serve more immediate terrestrial interests.

There are some very specific plans. But only a part of this long-term planning has been officially approved in the sense that we can actually count on the necessary funds. One of the tasks President Nixon has set for us is this: Make space travel more economical. Right now it is a fact that many of the useful "spinoffs" space exploration holds in store for the man in the street or science in general is just not "on" as a commercial proposition because of the high cost of space tech-

Cost Effectiveness

ENGEL: Would you say that the decision that sparked the Apollo program was politically justified but not necessarily sound from the point of view of cost effectiveness?

VON BRAUN: One can't think in terms of cost effectiveness major projects such as this. ENGEL: But do you think it was justified to stake \$21 bil-

lion and a balf-million men on the Apollo project? VON BRAUN: May 1 put this into a different perspective and answer your question like this: I am absolutely convinced, and we can document this, that by spending those \$21 billion the U.S. became richer, not poorer.

ENGEL: You mean its effect on technology?

VON BRAUN: Yes. By virtue of the Apollo program both science and technology have tremendously benefited. A number of new capabilities were developed that did not previously exist, and many of these have percolated back into and for tha

benefit of industry.

Remember this: Not a penny of this money was "spent" on the moon. It went to American factories, American universities, into the mainstream of American life in salaries, wages, to department stores, for food, automobiles. And the American economy has learned that America needs programs of this order to trigger the focusing effect that is needed today to provide the boost to technology and science.

Even the average American taxpayer sees more in the Apollo program than just junar rock, and he knows exactly what it has done for the economy. One example, Since the Apolio program was issuached, the American computer industry, which then had a turnover of some \$1 billion, has expanded into an \$8 billion industry. Virtually every single "real time, on-line" high-speed computer is American made. The entire technology is again a direct spinoff of the space program.

ENGEL: Doesn't all this add up to a switch in priorities, even within the space program itself?

VON BRAUN: I don't think it is correct to call this a switch

in priorities, for whatever the space program has done and is doing for science is simply an unplanned spinoif. Here I must point out one thing:—History has proved that one cannot go about programming scientific and technological breakthroughs by setting out to make better pots and pans or better cars or adding machines. The best way to open up new avenues and opportunities is to come up with exotic challenges, then present them to industry. I'm not saying that the breakthroughs we negotiated could only have stemmed from the challenge to put a man on the moon. Perhaps, had we been presented with the thought back in 1961 to produce a reusable space trans-porter, we might have accomplished something of the same order.

Terrific Impact?

But I don't helieve that the concept of a reusable space transporter would have fired the imagination of mankind as did the prospect of landing on the moon. The pictures of the earth the astronauts took and brought back from the moon made a terrific impact, even on our ecologists. Why? Because for the first time they saw the earth as a tiny planet, with limited resources, with its "thin-as-breath" atmosphere, its utter vulnerability to misuse.

ENGEL: In the wake of the moon landing of Apollo-11 we have the inevitable anti-climax. Interest is flagging. The funding is being cut. How do you explain the slackening interest and response to the space program?

VON BRAUN: Human progress always comes in waves. Look back in history; every other generation was clean-shaven, then the next two were bearded. There were always generations who concentrated on materialistic things; then there were others who preferred to beautify. I personally find it most encouraging to see the dedication of our young adults to combating environ-mental pollution. Alas, industry, and I mean industry everywhere, has perpetrated a pretty foul thing with its pollution of rivers and the very atmosphere we breathe.

I feel that the space program can make a very active contribution. We are already using satellites to survey the sites and sources of pollution. Where do tha rivers and seas become polluted, where do the principal polluting agents get into the

ENGEL: A new role for satellites? To act as spies in the skies, policing the heavens to help prosecute environmental delinquents?

VON BRAUN: Why not? But with the proviso that the basic targets of the space program are not sacrificed. That application is only one way satellites can be put to work for mankind. ENGEL: It's still a far cry from what you preached two

decades ago-that once a moon landing was accomplished, the

t step was to land on Mars.

VON BRAUN: Do not think that this original program, to head for Mars, has been dropped. It will be carried out in due course. But we must not overlook the fact that human needs and priorities also move in cycles. Projects such as a manned landing on Mars will have to take their turn. And what if no one makes a manned landing on Mars during the next generation? Mars is there to stay. It won't run away.

So we may spend the next decade applying all that we have learned in space to make a real bread and butter contribution on earth. The new resulting spinoff, a reverse spinoff this time, by way of new funds, would in turn be re-injected into the space program to generate new projects.

ENGEL: You still believe that perhaps in ten years we will be building on the moon, as you once predicted?

Permanent Moon Stations

VON BRAUN: Yes, yes, I am convinced that by the year 2000 we shall have permanent research stations on the moon. ENGEL: How long do you think it will take for space travel to become self-supporting?

VON BRAUN: I think that in 20 years we shall have reached the point where space travel will earn more than it is costing. The principal problem then will be to see that the profits derived from the bread and butter business that the space program will have generated are indeed plowed back into the research and development coffers of space divisions not yet able to operate

Weather satellites are already doing a splendid joh and there's a sizable program in the mill for working up a really reliable. long-range forecast system, covering about 14 days and providing a global service. But the most important satellites for world economy will probably be the so-called resource supply satellites.

These can provide at-a-glance surveys and observation reports on the world's entire area under cultivation. With multi-spectral measuring instruments they can, for example, differentiate between a crop of tye and wheat, or cotton and rice. And this data will include information as to the quality of the crop, even the

I am sure that by the year 2000 people will wonder how we ever managed without communications satellites.

THE AMERICAN space program is going to have to start paying its own way before the United States can put a man on Mars, in the opinion of Dr. Wernher von Braun, deputy associate administrator of the National Aeronautics and Space Administration.

In a recent interview with Johannes K. Engel, editor of Der Spiegel, the West German news magazine, Mr. von Braun predicts that it will take 20 years before economic space travel can be achieved. In the meantime. he says, NASA is going to have to turn from manned exploration of space to exploitation of the data gathered during the \$21 billion Apollo project. This data, he says, will have to be applied to management of earth projects such as cleaning up the environment in order to put the space program on an economic basis and provide funds for additional space exploration.

Here, in a New York Times special feature, are ercerpts from the interpleto.

ENGEL: That may he true for the year 2000. But right now the atmosphere far more reflects an 'end of the world' mood. After the mass dismissals and budgetary cuts, people at Cape Kennedy have the feeling that they are working on a project

which no longer has a great future.

VON BRAUN: It stands to reason that when you talk to someone here, who works for a firm whose Apolio contract is running out, he will tell you that. But don't forget that the scheduled end of the tremendously successful Apollo program is only a single phase of a very much bigger and long-term project.

ENGEL: But surely, isn't this a terrible waste? Take this quote from the Bulletin of the Atomic Scientist. It says that with the half-million men involved in Apollo, the United States created a technical machine never before matched in history. Now this force is being split up . . . the giant machinery itself is disin-

VON BRAUN: "Terrible waste" is right. And it points a finger at the root of the trouble. But it also shows the high price free enterprise has to pay for letting its forces interact ENGEL: Where everything must follow the bible of market-

VON BRAUN: And the laws of the marketplace. Here at NASA we see this every time we compare our program with the Soviets'. Theirs, of course, runs strictly in the grooves of fiveyear planning.

ENGEL: And? VON BRAUN: All I can say is that when Uncle Sam spits into his hands and says, "OK, let's get going and put a man on the moon," then the Russians will simply get left behind. They did their best to beat us to a landing, we know that, ENGEL: Why did they fail?

and staying power, which they have demonstrated with their various programs, they just happen to lack the ability to get

in the technical sense, but social sense, their social system?

VON BRAUN: Yes. When it comes to the crunch, where a nation feels it has to mobilize all available manpower at its disposal, a free economy invariably has the knack for getting

an appeal for another major space effort, such as President Kennedy initiated?

The other part prompts me to tell my associates here that we have been living under the hypnotic spell of the Apollo complex too long. We have become spoiled and mesmerized by the fact that a President told us: "We will land on the moon. We hardly even had to put up a fight to get our budgets through. But now that we have landed on the moon we must not make the cardinal mistake of imagining that all this can go on forever. Apollo syndrome. It might prompt us to ask: "Where's that new man on a white charger who will offer us Mars on a silver platter?" I am sure this man will not be around for quite a while yet. That's why I say we must become viable. We must get on a bread-and-butier besis.

ENGEL: Is it thinksbie that another Russian challenge could give the American space program a new boost?

VON BRAUN: The Russian program is most competently execut-

will be turned down will be opened up to its full extent.

Frankly, I think it would do the American taxpayer a world of good if this hot-and-cold routine were balanced out a bit. ENGEL: Cen't this be done by retting up some joint ventures

with other countries?

VON BRAUN: We have already invited a number of European and France, for example,

VON BRAUN: Because they realize that a major program, so highly complex as Apollo, is absolutely essential to provide new

VON BRAUN: My own feeling is that despite their teracity the best out of their people.

ENGEL: You mean there is a fault in their system, not

ENGEL: Would you say that it would be feasible to launch

VON BRAUN: I must confess that I'm torn in two over this. Part of me says "Yes": Of course, I would be more than dellanted if tomorrow President Nixon said, "Now let's head

It's very dangerous to allow oneself ic come under such an

Another Challenge

ed, very steady, very step-by-step, but not very exciting.

If we were to rest overlong on our laurels and say we would do no more right now than to keep our rivers free of pollution, we could find curselves rudely awakened by some sort of a Sput-nik shock. Then the tiny pilot flame to which our space effort

plored the Sea of Rains since Nov. 17, 1970, when it was deposited on the moon. Brain Signals in Test Foretell Action by Chimpanzee

By Harold M. Schmeck Jr.

WASHINGTON (NYT).-There was a chimpanzee in California with a talent for playing ticktacktoe.

Its trainers were delighted with this evidence of learning. but they were even more impressed by something else. They found they could tell from the animal's brain waves whether any particular ticktacktoe move would be right or wrong. It depended on the chimpanzee's state of attention. When the trained animal was properly attentive, he made the right

The significant fact was that the scientists were able to recognize that state. By elaborate computer analysis of brain wave signals they were learning to distinguish what might be called "states of mind."

This was far more ambitious than simply detecting gross states of arousal, drowsiness or steep. It was a new step toward understanding how the brain works.

The chimpanzee, and the research team at the University of California at Los Angeles, have graduated from the ticktacktoe stage now, but the work with brain waves is continuing. It has already revealed some surprising insights to the brain's behavior during space flight. It shows promise of application to social and domestic problems on earth and even to improvements in human learning.

Brain Research Spreads

It is part of the large ferment of modern brain research in progress at laboratories throughout the United States and abroad. Invoived are all manner of creatures from men and monkeys to rate and mice, goldfish, flatworms and Japa-

The ultimate goal is to understand the human brain-that incredible three-pound package of tissue that can imagine the farthest reaches of the universe and the ultimate core of the atom, but cannot fathom its own functioning. Each research project bites off a little piece of an immense puzzle.

PHOTOGRAPH OF LUNOKHOD, the moon rover, has just been published in Soviet

periodicals, together with a report on its construction and performance. Until now,

no such detailed photo of the vehicle had been made available. Lunokhod has ex-

At the Brain Research Institute of the University of California, Los Angeles, one series of projects involves analyzing brain waves with far sophistication. than. doctors use in ordinary diagnostic work

In the case of the chimpanzee being taught to play ticktack-toe, even the trained eye could see nothing beyond the ordinary in the wavy lines traced oo paper to represent electrical waves from an animal's hrain. But, through analysis by com-puter, it was always possible to tell which traces showed that the animal was about to makethe right move and which proceded a mistake.

Computer's Role The correspondence was 100

percent, Dr. W. Ross Adev. head of the institute's space biology laboratory, said during a recent interview. An important key to the work was the system of computer analysis developed largely by Dr. John Hanley. The scientists concluded that the computer was able to detect some states of mind reflected in the brain waves. The one that always foreshadowed a correct answer was a state that might be described as trained attentiveness. Without the computer's ability to analyze the huge complexities of the

recorded brain waves, the "sig-

natures" of such states could

not have been detected.

In related studies, the re-search team has asked human volunteers a series of questions and has been able to tellagain, through computer analysis of the brain waves-when any given question was stress-

ful or scutely embarrassing to the individual. This too was interesting because it suggested the computer analysis was detecting the signature of a state

One idea, Dr. Adey said, is to

Mirror image of chimpanzee playing ticktacktoe at UCLA. Computer, connected to brain, analyzes moves.

auto driver in rush-hour traffic to see how much, and in what particulars, the experience disturbs him. Another prospect is for doing such studies on family members in a home environment in a search for causes of

domestic tension Tha ability to tell when a person's attention is highly focused has suggested to the scientists an even more concrete application. For about a year they have been considering a way in which this might be used to improve human performance in learning.
The idea is simply to link the

student to a brain wave recorder and a computer. This equipment would automatically gauge his state of attention and present material to be learned -a vocabulary list for example only when attention is at a

Electrical Field

A bizarre phenomenon has been demonstrated by research with monkeys in the space biology laboratory. An animal thoroughly trained to estimate short lapses of time, in. the range of about five seconds, began to make mistakes under the influence of a weak electric

The field was generated at seven cycles a second to match one of the main rhythms of the animal's brain waves. Itwas presumably too weak to be detected by the animal or to cause herve cells to dischargebut under its influence, the monkey thought time was passing substantially faster than WES really the case.

This could have practical implications. There are many circumstatices in which humans are exposed to electrical fields of equal strength. Such fields are sometimes generated by unshielded wiring or in the vicini ty of powerful equipment.

One of the most puzzling en important characteristics of the human brain is its ability to rearrange reality to suit its own needs and prejudices. Adult given distorting eyeglass lense that make everything look up side down will learn before lon to see everything right-side u even while wearin, them.

This tendency of the brain see the world as it wants it one of the prime factors everyday optical illusions. Ti adult sees what his brain tel if the actual scene shows some thing else. Children often a the illusion as it really is.

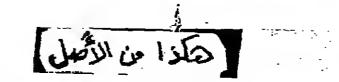

Scientists involved in th particular area of research this it, too, tells something about d brain and something more is portant about people.

The adult systematically arranges his view of the wa to conform to his experience How he does this is a new physiological mystery that like to sound," said Dr. Rob B. Livingston of the Univers of California at San Diego di ing a recent interview. He s the importance of this sa got

fer beyond problems of vision If man's physical view of \$ world is a synthesis based his own prior experience, the is also evidence that one's me tal view-including religion a politics-involves the same :

lough of newer vintage.

Love Restores a Life Crippled by Night of Torture tion of the world at 18 months of age in Brooklyn. Before this, her mother and father drinker unhappily married to another drinker-regularly beat the child in alcoholic rages. They mauled her with lists and straps, causing welts the size of raisins. The child had no reply from her crib but shrieks and moans.

This only enraged the parents more. One night neighbors noticed the crying had more animality to its wall than before. They called a policeman. He crashed into the apartment and, led by the shrieks, went to the kitchen. There, in e large frying pan. Laura was being burned alive by her

This night of misery passed. Hospital doctors, rising to the rare medical challenge of re-viving cooked flesh, brought

the infant's body back to life. Laura's mind was something else. In the following months. she rarely moved, ate poorly, avoided play objects and sat for hours on the hospital floor in a blank trance, an escapee of hell deported to limbo. At age three, still hospitalized, her eyes were crossed, her spine had a severe curvature and the

By five, Laura had yet to pronounce a word. She could not walk without help. Tests showed an IQ of 50; some doctors labelled her mentally deficient and others saw her ghastly withdrawal as schizophrenia.

veins of her legs were vari-

Plans were made to dump the primitive child in a state mental hospital. By chance, however, a group of Catholic sisters belonging to an order

for Laura. The American public is seeing much of Catholic sisters these days, with the FBI tapping their minds and judges jailing them for keeping silent about their pacifism.

But the best of them-meaning nearly all of them-are still devoted to the thankless works of mercy and rescue that every society needs, especially this one. Laura's sisters rose at 5 a.m., retired at midnight seven days a week. Some money came from the city, the rest was

The sisters did everything for Laura. They had to. During her seven years at the home-and the sisters made it a true home-the child never spoke a word. She didn't play or smile. She remained a lone citizen in her world of with-

Many Catholic sisters, when one gets to know them, say the hardest thing in their lives is keeping alive belief in God; spiritual aridity dries up any feeling of a personal deity. Yet, in many ways, belief in God is often very easy when compared to believing in a human being like Laura, where life is so painfully absent. Heroically, the sisters refused to doubt or despair, making one of the harder acts of faith become one of the harder acts of life—loving the

ugly and deformed. A young psychiatrist visited the home by chance one day. At first, he said little could be done for Laura. The sheer atrocity of her frying pan trauma had forever pushed the child behind a protective wall of fantasy. But the doctor asked to work with Laura.

psychiatrist tried for two-way communication. It remained one-way-from him. His friendship and work received nothing in return but mute etares. Only a rare tear down Laura's cheek gave evidence that within her hunchbacked body an emotional life existed.

After hundreds of hours of social and play therapy, a momentous breakthrough came: the child accepted a candy bar from the psychiatrist. Normal children learn this mechanism -grasping a desirable objectat two or three months. Elated at this progress, and overlook-ing the quick emotional retreat following it, the doctor invested more and more of his own time and practice.

Another breakthrough came. While the two walked on a street near the home one afternoon, a group of raucous boys on roller skates came blustering by. Laura grabbed at the doc-tor's waist for protection. Like anyone else, she reacted to fear by reaching out to another person. Laura was not psychotic after all, thought the psychiatrist, who suddenly felt like singing.

Finally, after his patient withdrew again into stlence, the psychiatrist built a miniature house where a toy family lived. He moved them around, staging a fight between the parents that ended in a beating for the baby. "No, no, no," screamed Laura, raising in contortion from the ohair. Her body quivered with 15 years of suppressed rage at re-enacted scene from infancy. For the doctor, the screaming was the greatest single sound he had ever heard.

No False Hopes

No fals: hopes were built up by the psychiatrist that Laura would ever be normal, but a long-shot chance existed nevertheless. Operations were planned to improve her eyes. back, legs and facial scars. Meanwhile, her silent rage released, Laura's speech improved almost by itself. In time, she went to classes at a nearby school. With great catch-up skills, she soon became much like the other teen-agers in the home. Laura's parents-now out of mental hospitals-came

around. She rejected them both, The psychiatrist in this awesome love story is Dr. Richard d'Ambrosio, a practicing psy-chosnalyst in Brooklyn. He told ebout Laura's life in a book called "No Language But a Cry." Published about six months ago, it has received little attention. The author took his title from Tennyson's "In Memoriam":

So runs my dream: but what am I? An infant crying

An infant crying for the

light:

in the night:

And with no language but a cry. Laura left the home and care

of Dr. d'Ambrosio at 18, a high school graduate. Her body had recovered and her mind was repaired. She received training as a baby nurse and took a job caring for young children.

Gallup Poli

Desire for Large Families Reaches 35-Year Low in U.S.

By George Gallup

PRINCETON, N.J., Feb. 21 .-The percentage of Americans who favor large families hes declined dramatically since 1967 and is now at the lowest point in the 35 years that regular surveys on the subject have

In the latest survey, conducted it January, only about one adult in four (23 percent) said that the ideal number of chil-dren in a family is four or more. The percentage was 40 percent in the fall of 1967, the last time the subject was dealt with in a survey.

The decline since 1967 in the percentage favoring large families has been most pronounced among younger persons and the better educated, groups which traditionally have been most opposed to large families.

Three basic reasons emerge from the survey to explain tho decline in interest in large families since 1967: The cost of living (particularly, the cost of education); concern over crowded conditions and overpopulation, and uncertainty of the

The previous low point in the percentage of adults fevoring four or more children was recorded in the Depression year of 1936: 34 percent. The high point over the 35-year period (49 percent) was recorded in 1945, re-flecting the high hirth rate of the war years. Following is the trend since 1936: Percentage Saying 4 or More Is

Ideal Number of Chile	
1936	
1941	
1945,	
1947	47
1953	41
1957	38
1969	45
1963	35
1966	40
1971	23

The following table shows the change in views between the two latest surveys by key popu-Percentage Saying 4 or More Is Ideal Number of Children

High school 22 Grade school 33 To obtain the results reported today, personal interviews wero conducted on Jan. 9-10 with a total of 1.502 adolis in more than 300 localities across the nation.

While a far smaller proportion of Americans today favor large families than was the case four years ago, the desire for larger families is considerably greater here than in some other nations of the world, as indicated by recent polls there. In Sweden, for example, only 6 percent of the people inter-viewed think the ideal number

of children is four or more. In Urugusy and Greece the comparable percentages are 12 and 10 percent, respectively, In Great Britain, oo the other hand, interest in large families currently exceeds that found in

the United States, and, in fact, has grown since the 1968 sur-AGZ. The following table shows the

latest results from Gallup affiliates abroad, compared with findings recorded in 1968: Ideal Number of Children Is

MINING & PETROLEUM FUND S.A.

Registered Office: Luxembourg, 37 Rue Notre-Dame.

The Shareholders are requested to attend the Extra-prdinary General Meeting of Shareholders which will be held at the Registered Office on the 8th of March, 1971, at 15:00 p.m., with the following agenda:

AGENDA --

—Amendment of Article 18, third paragraph of the Articles of Incorporation so as to read as follows:

"The Corporation may suspend the determination of the "Net Asset Value of shares, and the purchase of its shares "from its shareholders, for the whole or any part of any "period a) during which the principal Stock Exchange on "the Corporations in present "which any substantial portion of the Corporation's invest-ments for the time being is quoted is closed otherwise "ments for the time being is quoted is closed otherwise "than for ordinary holidays or during which dealings "therein are restricted or suspended, b) during the existence of any state of affairs which constitutes an emergency as a result of which disposition by the Corporation of investments owned by it is not practicable, c) during "any breakdown in the means of communication normally stateled of the control of the contro "employed in determining the price of value of any of the "Corporation's investments or the current prices on any "stock exchange as aforesaid. Any such suspension shall "be publicized by the Corporation and shall be notified to shareholders requesting purchase of their shares by the "Corporation at the time of the filing of the irrevocable "written request for such purchase as specified in Article "16 hereof."

The Shareholders may attend the meeting in person or by proxy. Proxy forms are available upon request at the registered office of the Corporation. The holders of bearer shares have to justify their share ownership by depositing their share certificates with any bank or trust company and delivering proof of such deposit to the corporation at its registered office at least five days before the date of the meeting.

The Shareholders are informed that the proposed amendments can only be adopted by a resolution of the shareholders holding at least 50% of the shares, and that if said quorum is not reached at the meeting a second meeting may be held for which no quorum will be required.

The Board of Directors.

Eurobonds

Market Turns to Housekeeping. Sorting Out Mass of New Paper

By Condoo Bakstansky

IS, Fch. 21.—The Euromarket took a deep breath eek with the let-up in is-activity allowing attention cus on some necessary seeping.

first seven weeks of the ear have seeo more than mulion of dollar-denomflotations alone and that pace, not surprisingly, has home, a situation which iw putting pressure on

new-issue yields have movhowever, borrowers have for the discount route or postponed plans rather adjusting coupons in what eems to be a falling-rate

example: Traosocean 830 million, 15-year issue so 8 percent coupoo was at 97 1/2 to yield more 3 I.4 perceot to maturity. more was apparently in or to the discounting apig in Continental Oil's 8 it flotation, priced the before at 99 1.4 and oow ig at 97 3/4. The Gulfs stayed at issue price.

ne observers saw a trap of at work here in that one of asons for the present dison double-A-rated Conoco hat money was switching he triple-A-rated Gulf Is-

the scenario was played the background of furracing in short-term dollar which tacked another or so goto the price of ent coupon bonds on the fary market. Thus Gulf's : 1984 rose 8 point to 104 et week, to yield less than percent to maturity.

influence of the moneyt rate drop cootinges to is in short- and mediumdollar onces, where prices s due 1978, for example, trading at 99 1.2 last up half a point from issue (which was 99 rather than par reported last week).

it will take two to three weeks for the new paper to sort itself

There is still potential for a downturn in rates, considering the two-point-plus spread be-tween bond yields and rates for short-term Eurodollars with which one can finance a bond position. And it is becoming more and more likely that European domestic markets will not be able to sustain present high

of the continuing move down-ward io the United States. Continued heavy demand for long-term funds would dampen any quick easing in bond market rates. Many observers are betting, in fact, that the market has already seen the major development of the year in this

interest rate levels in the face

But the hope is that the hill before the next new-issue rush will erase the more artificial aspects of discounting on bonds which have not yet fed through to the retail market. The price deterioration itself should attract retail buying on the basis of yields approaching 9 percent on some newer issues, according to some analysts.

Among issues priced last week, Plessey's \$25 million of 15-year debentures with an 8 1/2 percent coupon came out at 88, then dropped a point in early trading to a yield level of 8,87

The City of Oslo and Finnish Mortgage Bank came out with \$15 million, 15-year issues with terms of 8 1/4 percent at 98 1/2, and 8 1/2 percent at 98, reepectively. Both were quoted at 97 by the end of the week.

Caisse Nationale des Télécommunications' \$20 million, 15-year issue came out at 98 with a coupoo of 8 percent and traded at 97 1/4. With those out of the way.

the lonely dollar issue now in offer is a \$30 million, 15-year flotation by Sweden's ASEA, maker of heavy electrical equipment. The anticipated coupon is 8 1/2 percent. On the deutsche mark side.

Commodity index, based on 1957-59=100, and the consum price index, based on 1057-59=100, are compiled by the Burean of Labor Statistics, industrial production is Federal Reserve Board's adjusted index of 1967-59-100. Imports and exports as well as employment are compiled by the Bureau of Census of the Department of Commerce. Money supply is total currency outside banks and demand deposits adjusted as reported by Federal Reserve Board. Business failures compiled by Dun & Bradstreet, Inc. Construction contracts are compiled by the F. W. Dodge Division, McGraw-Hill Information Systems Company.

the Danish Mortgage Bank priced its 70 million DM, 15-year, 7 3/4 percent issue at 99 1/4 to yield 8.01 percent and the South Africao Electricity Supply Commission's 100 million DM, 15-year issue at 8 percent came out at par. Courtaulds promptly stepped in with plans for a 100 million DM, 15-year issue

week and latest available.

Alosoisse, meanwhile, announced a 60 million guilder, tive-year issue with a 7 1/2 percent coupon at par. But the real news in this sector was a European Investment Bank issue of 75 million guilders for 15 years with an anticipated coupon of 7 3/4 percent.

For one thing, the EIB issue marks the first time the Dutch have allowed long-term international debt raising in their currency. For another, the EIB issue is syndicated, as are dollar and DM flotations. Up to now, the guilder offerings have been on a "faucet principle"—that is, s group of banks announce they will sell so much of notes at such-and-such terms and as soon as orders reach the desired total, they close the books.

The "faucet" system is easier

Caution Takes Over as Dominant Wall St. Mood; Stocks Slide, Bonds Drop as Rates Rise

Amex and Over-Counter

NEW YORK, Feb. 21 (NYT),-Most prices on the American

Profit-taking was mostly responsible for the weaker tone. The

The exchange's price index finished on Friday at 25.03, off 0.34

Turnover on the Amer dropped to 24,622,710 shares from

33,288,857 shares in the preceding week. The market was closed on Monday in observance of Washington's birthday.

Although the majority of Counter issues lost ground, the National Quotation Bureau's index of 35 industrial stocks showed

moderate gain. The index rose 4.70 points to end the week

Among the Counter issues registering losses were Frigitronics.

which dropped 5, and Electronic Data Systems, which eased 47/8. The First Boston Corp. lost 4; Data General eased 3 and Alcon Laboratories was off 2 1/4 points.

Resisting the lower trend, Donnkenny, manufacturer of wom-en's sportswear, climbed 4 1/2 points. The company is expected to report an increase in its 1970 earnings.

tacked on a point in active trading. The company announced it had acquired Yoo-Hoo of the Midwest through an exchange of stock.

Most insurance issues were depressed on profit-taking in fairly active trading, Connecticut General slipped 3; St. Paul Companies fell 2 1/2; American International Group dipped a point and

Another winner was Yoo-Hoo Chocolate Beverage Co., which

Stock Exchange and on the Over-the-Counter Market declined

The majority of price changes in both markets were under a point although some issues responding to special situations had

market had been moving upward almost steadily since November and the downward trend last week was considered normal if not

By Thomas E. Mullaney NEW YORK, Feb. 21 (NYT).

A new mood-more captious and more questioning but perhaps quite temporary as wellappeared to be enveloping investors last week as the spec-tacular rally in the financial markets finally began to taper off after its three-month surge. Is the extended market move

finally nearing its end, or is it only reaching an intermediate point? Wall Street is not at all sure and has, therefore, become a bit wary,

The inclination to watch and wait for a while ras evident in the rather erratic performance of both the stock and bond markets last week.

With its hectic trading pace greatly diminished in a post-holiday week, the stock market gave up some ground after eight consecutive weeks of pronounced upward tendencies, while the bond market saw prices decline and yields rise for the first time since November.

It was hardly surprising that the markets turned somewhat hesitant. They were buffeted by a considerable amount of adverse news, including some disappointing economic statis-tics, the impasse over a program to achieve wage-price stability in the construction industry, a strike in the can industry, an expensive price settlement in the Mideast oil negotiations and increased tension over the possible implica-

tions of the Laos operation. Limited Reaction

With all the problems confronting them, the markets did well to retain their balance as firmly as they did. Their limited reaction so far has been in marked cootrast to their talispins last year in response to bad news.

Quits obviously there's a new spirit of optimism in the investment world that is tied to the decisively easier tone of the money market and to the conviction that Washington will take resolute steps to achieve administration'e twin goals for 1971 and 1972-a big exon of the economy and

Market

skeptics, however, think the euphoria over the economy has been blinding investors.

The most disappointing news of the week, particularly to those who have accepted the administration's projection of a strong expansion of the economy this year, was the smallerthan-expected gain in industrial production last month.

Also disheartening was the ominous report on price trends and the big drop in housing starts in January after the excessively encouraging statistics that had been issued on Decem-

last week in active trading.

at 417.29.

index might match, or approach, the 15 percent jump that had occurred '- December, when factory output was recovering from the General Motors strike, But the gain last month turned out to be only 7/10 of 1 percent, leaving the Federal Reserve index still 2 percent below the pre-strike level of last August and 5.4 percent under the record peak reached in July, 1969.

January's industrial production

Without the benefit of catchup activity following settlement of the General Motors strike, the index might have been flat

quickens in the spring, the administration's hope for a 9 percent growth of the economy this year to a gross rational product of \$1,065 billion will not be realized.

rather sluggish and slower recovery of the economy at the mid-point of the first quarter are the moderate pace of general retail business and the rather lethargic trend of new-car sales. The latter showed a rise

are still quite cautious, preferring to save larger amounts of their rising disposable income

report that wholesale prices had spurted strongly during Jan-uary. The wholesale price index was up 5/10 of 1 percent. This was offset to some extent by the fact that the advance in the consumer index last month had slowed to 8/10 of 1 percent from December's 5/10 of 1 percent. Yet these gains raise considerable doubt about the administration'e prediction that the overall rate of inflation will be reduced in 1971 to the area 4.5 percent from last year's

have not been as confident as administration officials over the likely improvement of inflation or other aspects of the administration's 1971 economic forecast. The husiness economists are holding to the view that the GNP will be in the oeighbor-hood of \$1,050 hillion, rather than the \$1,065 billion that the administration has been pre-

ments, however, were oot gloomy for investors and busioessmen. In a brighter vein were the further reductions in tinoed on Page 10, Col. 7)

e consensus is simply that Y YORK (AP) — Weekly Over the cr industrials giving the high. low ast ad prices for the week with the hearge from the archivals week's last once. 					- .

The major reasons for the of only 8 percent in the first ten days of February. It is obvious that consumers

rather than increase their spending for durable goods. There was concern over the

Private economists, in general

All of the week's developinterest rates; the wage ement reached by the third our railroad unions as the ch 1 strike deadline apches, and indications that

Wall St. Turns Cautious; Stock and Bond Prices Ease

(Continued from Page 9) President Nixon was ready to take some positive steps if labor and management in the construction industry do not voluntarily act to hold down

Of broader consequence than the other favorable actions were the cuts in interest rates, con-tinuing the trend that ac-celerated last fall. The prime rate was lowered another 1/4point notch to 5 3.4 percent by the major banks, the ninth reduction since a high of 8 1/2 percent prevalled early last year. And the ceilings on mortgage loans backed by the Federal Housing Administration and the Veterans Administration were lowered to 7 percent from 7 1/2, the third reduction in three months from their 8 1/2 percent peak.

In the bond market last week, one of the most significant developments was the decision of the Federal Reserve to pump a large amount of new credit into the banking system, following up quickly its reduction of 1/4 point in the discount rate to 4 3/4 percent that was an-

nounced on Feb. 12.

Despite the money-easing initiatives by the central bank, the corporate and tax-exempt bond markets declined in price and rose in rate during the last week. The chief reason was the increasingly large supply of bonds scheduled for sale in the near future, but dealers and investors were also worried about the longer-term implications of Ped's reflationary monetary

investment bankers priced an ue of high-grade utility bonds yield 7.15 percent lest week-20 basis points higher yield. wever, the new offering did t sell particularly fast, as

ter-American Bank in French **Capital Market**

WASHINGTON, Feb. 21

(UPI). - The Inter - American

Development Bank today announced a public bond issue of 100 million French francs in France. The bond issue, placed the French market; will be the

first entry by the bank into that capital market. It follows anthorization Feb. 2 by the French government for placing 200 million francs in bonds by the bank on the

next two years. The issue announced today bears an 8.5 percent interest rate and matures in 18 years, 30.6 34.0 rate and matures in 18 years 1.83 2.03 with a two-year grace period.

French capital market over the

ed the conclusion that long-term rates are once again heading upward.

The turnabout in the stock market was broad but not deep. Bs trading for the four-session holiday week slowed perceptibly from its recent record pace.

Reversing its performance of the last two months, the stock market registered moderate declines in all the leading price indexes and a generally lower trend among issues traded. Stocks that declined outnumbered those that advanced by bet-

ter than 8 2-to-1 ratio.

The Dow-Jones industrial average fell back 10.27 points to 878.56; Standard & Poor's 500-stock yardstiek was down 1.69 to 96.74, and the New York Stock Technology Composite de-Stock Exchange composite de-clined 0.96 to 53.20.

Trading on the Big Board slowed to an average of 18.5 million shares daily from .22 million the week before.

Four of the five most active issues declined. Leading the pack was Greyhound, which fel! 5/8 to 19 1/4 on turnover of 2.114.000 shares. Two million of these shares traded on Friday afternoon, when two one-million-share blocks crossed the tape. In second place was Oc-cidental Petroleum on turnover of 832,500 shares.

American Telephone was next on the list, sllpping 1 3 4 to 50 3/4 with 650,200 shares changing hands. During the week, the giant utility an-nounced plans to ask shareholder approval for the authorization of 150 million shares of common stock and 50 shares of

Eurobonds

(Continued from Page 9) to handle than one in which allotments have to be made among all bidders, but it tenos to favor those with the quickes: communication system.

The other point of interest last week was a surge in prices for Japanese convertibles following Tokyo's announcement that non-government borrowers will not be allowed on the international market. That pushed Mitsubishi Shoji 7s due 1985 up 3 1/2 points in the week to 109 bid, for example.

Japanese borrowers have not been very active in the market for a year or so-they raised only \$108.3 million in 1970, down from \$246 million in 1969-but the formal closing off came as something of a shock as it is known that many firms had hopes of coming to market.

example of how the ines apply is the establishof Johnson & Johnson, a owned U.S. company,

which built a plant in the Pomezia area, south of Rome, four years ago. William C. Cabrera, president of the Italian division of J & J, says that besides the 10-year tax holiday, the company received a 15-year loan at 3 percent for construction of the plant and its equipment-a total investment of about \$2 million. It also received a 17 percent grant from the Cassa on the investment. Labor Source

Mr. Cabrera notes that J & J had no market in Italy before building the plant. "Rome was chosen because it is an excellent location for distributing our

products. Seventy percent of the products are sold in the north, but we believe that rapid expansion is coming in the south. We first thought of locating in a depressed area of northern Italy. But such locations were too far from the towns." Mr. Cabrera says. "And labor was a problem."
And labor in Pomezia? "We

employ 200 or so, mostly women," Mr. Cabrera says. "There is no problem of labor. We had to train farm-oriented people, but we found them extremely intelligent and willing. After the initial six months, we find the output of the employees here is as good today as in industrial centers of the

Sicily:

Tourist and Investor Climate

PALERMO.—If you are a tourist, Sicily has almost all the natural vacation advantages: sandy beaches, clean water, a mild climate almost all year round, ancient ruins to explore, modern art forms to examine If you are a businessman, Sicily contains all of those advantages, plus one more: it has a shorte ge of accommodations. And it has a central and region. government anxious to provide the financial incentives

to help you provide the accommodations.

Sicily is no longer the abject, impoverished stepchild of Italy. Through the central government's program to breathe new life into the south—the socalled Mezzogiorno-the infrastructure necessary to allow torrists to more easily and quickly from one end of Sicily

to the other has been con-structed. Specifically, it is the Cassa Per il Mezzogiorno—the governmental body with re-sponsibility for development of industry, agriculture, tourism and infrastructure—whose efforts are making Sicily more attractive to tourists and to potential investors.

Its beanty, however, should be the initial reason for focusing on the island. There are splendid mountainous areas stretching from inland to the glorious Mediterranean, includ-ing etately Mount Etna, with its puffing, active volcano. There are beautifully preserved re-mains of the ancient Greeks at Syracuse, Agrigento and Selinunte, and traces of Norman, Byzantine and Arab influences on architecture everywhere.

The climate of Sicily, also,

compares favorably with that of internationally famous resorts. Data collected over a period of eight years, in fact, shows that the everage temperatures are higher in autumn, winter and spring in Palermo than in Biarritz, France, or in Palma de Mallorca in Spain, thereby ensuring a longer vacation season. The average number of rainy days each year in Catania. Sicily, is 54, while in Biarritz it is 177 and in Athens 101.

The natural beauty of the Memoglorno and its 5.000-mile coastline is not news to many tourists. However, the centers of tourist attention have always been Naples and the areas and islands near Naples and Pompeii, Sorrento, Amalfi, Capri, Ischia and also Taormina in Sicily. The reasons were natural beauty (Continued on Page 17, Col. 4)

FRANCE ____

Paris Region: A Concern For Economic Balance

By Jack Monet

DARIS-Among his colleagues at the government's regional

development agency. Bertrand Cuny is known as "the man with the stick." He is in effect the admin-istrator of a system of fees the government uses to discourage unwanted investment in the Paris region.

The fees range from 50 francs (\$9) to 200 francs a square meter of floor surface in new buildings, depending on where the site is in the Paris region. In some areas, the fees soon will be doubled to 400 francs.

The fees can carry quite e sting. Some of the tall office buildings at the La Défense complex, a few miles west of the Arch of Triumph, cost the builder 1,000,000 frames (\$180,-000) or more in floor surfece

Apparently Unique

The fees were instituted in 1960 and add about 50 million francs (\$9 million) a year to the public treasury, As far as Mr. Cuny knows, no other region in the world uses such a system to deter certain invest-

Paris's plight is just the op-posite of New York's. French authorities are not distressed when a major company moves to the provinces. Rather, they are vigorously stimulating the decentralization of a congested region that contains 8,000,000 persons—a sixth of France's population—and a large part of nation's husiness offices and manufacturing enterprises.

Any firm—French or foreign -seeking to locate in the Paris

area has to submit a dossier to a committee of which Mr. Cuny is the chairman. "The dossier must prove," Mr. Cuny said, "that the industrialist cannot go anywhere but in

the Paris region." Firms also must argue for want to expand their offices or factories beyond a certain space

But what the state takes with one hand it sometimes gives out with the other. For firms closing up in the Paris region and moving to the provinces, there is under certain conditions something called a "dem-

olition cash grant."

Combined with other measures, the fees apparently have had some effect in pushing in-dustry from Paris. From 1962 to 1970, there was a decline of 71,000 in the number of industrial employees in Paris.

where the fees are highest, and a drop of 22,000 in the edjacent suburbs. where the penalties are near the top of the range. Meanwhile, suburbs farther out and 'new towns" in the

region each gained about 50,000 industrial jobs.

More than a third of the increase in industrial expansion used to take place in the Paris region. Nowadays, the figure is

down to 10 percent. State planning has met with much less success, however, in guiding the creation of office jobs in desired areas. Although the fees are highest in the western areas of Paris and its suburbs, and low in the eastern sectors, three-fourths of the new offices in the Paris region in the last six years have settled pear the Avenue des Champs-Elysées or to the west.

But a good portion of the new housing is going up in the east-ern areas. Distances between home and joh are growing. sometimes involving four hours travel daily.

The despair of these travelers is summed up in the rbyming (Continued on Page 14. Col. 6)

Lorraine:

Opportunities in a Depressed Area

METZ. France.—Deep into the postwar period, while Lorraine's iron and coal mines and steel industry were still critically needed for reconstruc-tion, the boom atmosphere in the province inspired for it the nickname of "the Texas of France."

"There was a bit too much cuphoria in those years, from 1955 to 1960," recalls Michel Lecaveller, secretary-general of the local economic development group, CAPEM.

"The attitude was that then were no problems, that the future was assured for the next 30 or 40 years. We had textiles, steel, coal, iron mines all going full blast."

High Subsidies

These days Lorraine is a re-gion with pockets of crisis. It is nowhere near becoming an Appalachia, but in some areas the economic situation is desperate enough so that the highest government subsidies are offered to encourage new investment in the region On a social level, there is an

unrest as the recent nationwide coal mine strike. The strike started at the mine at Faulquemont, 25 miles east of Metz, and was called to protest gov-ernment plans to close the pit in a few years (the mines were nationalized in 1946) and to close other pits later in the Especially after the Tehran

oil accords and in view of Pa-ris's difficulties in the Algerian negotiations, the government for phasing out coal mines, the strikers maintained. The reversal in Lorraine's

fortunes is such that in a provincial population that shot up during the boom period to 1.000,000 from 600,000, drawing immigrants from other regions of France and from the Mezzogiorno, about 30,000 persons cross the border daily to work in Germany.

The young workers are the hardest hit by the economic slide. The dying industries are not replacing workers who retire or die. And Lorraine has a young population 44

vestors one with 800 rooms.

years old or less. The turnabout in the value of the Lorraine mineral re-

sources, so prized by Bismarck and Hitler (and Jean Monnet), came suddenly, late in the 1950s. In coal production, for instance, a record high of 60 million metric tons was reached in 1958. The plan for that period looked to an eventual production of 65 million metric

But by 1960, new targets for which, depicted in chart form, show a ski run with production in 1975 at about 13 million

The iron and steel industry once was so confident of the future that it worked hard-and succeeded-in keeping new in-dustries out of its corner of Lorraine, It thus had a monopoly over the skilled labor available.

It gave up this approach in 1960 and since then has introduced modern facilities requiring less labor. In addition, it is shifting some of its investment funds to projects at For west of Marseilles

What happened about 1960 is that the iron and coal mines in Europe in general-were suddenly recognized as unproductive, or at least seen destined to become so in the near future. The veins were running thin or were becoming difficult to get

extraction by "open pit" methods used in some other areas of the world was not possible with the Continental veins. (Cosi from the United States and Poland is cheaper for Le Havre power stations to use than coal coming from Lorraine.) As for the iron mines, the

In the case of coal, the cheap

ore had always been of a relatively low grade that required the steel mills to set up as close as possible to the mines to order to limit costs. In the 1970s, high grade ore from Sweden and Mauritania and other areas is evallable at such attractive prices that the steel industry in France is shifting to the coasts, notably at Fos and Dunkerque.

"Not too much noise is made about it," says an official in Nancy, "but it seems likely that instead of producing 80 percent of France's steel, as it does now, Lorraine may be producing only 20 percent in 20 years.

Crisis in Vosges

The crisis to the textile industry, centered in many small towns in the Vosges Mountains. was outlined to Paris by Jean-Claude Auzou, a Lorraine specialist et DATAR, the government's regional agency.

The factors include the loss by France of its former privileged markets, the decline in military uniform purchases and increased competition from developing countries, where labor costs are low. Industry equipment is outmoded, hinder ing competiveness.

"Some companies took the (Continued on Page 12, Col. 4)

PORTUGAI

A Booming Travel Trade Creates a Vast Area for Investment

By Miguel Acoca

FARO, Portugal.—The Algarve, the most southern province of Portugal, is a sleepy region of Atlantic beaches, rugged seaside promontories, villages of white, box-like Moorish houses, flower gardens, and gentle hills with groves of almond, fig and orange trees. The climate is usually benign, the land rich in the rums of history, and the Algarvian gay and hospitable.

All these—plus the sparse population of only 300,000 in an area of 3,200 square miles—add up to tourist assets in a world where people are continually searching for Xanadu. The Portugrese government, and private promoters, have been investing large sums of money to turn the Algarve, where mule carts and bikes are still the main form of transportation, into a vast tourist complex that will appeal to Americans, Europeans, South Africans, Rhodesians and Por-

Tourists have been coming in increasing numbers by sched-uled and chartered jet flights into Paro, which has the only major airport in the province, by car from Spain or from Lisbon, and by yacht. They flock to the hotels, the boarding houses and state-operated inns. Many go shopping for an apartment to buy in new condominiums, a building lot or a villa in one of the many existing or planned

tourist developments. Neither government officials nor tourist promoters venture to cuess how many tourists will come to the Algarve in 1971, but they are happy with the prospects and plan to build more villas, inns and hotels.

Although 1970 figures are not yet complete, tourists spent more than 1,353,000 "hotel nights" in the Algarve in 1970, up 30 per-

ALGARVE

cent from 1969. This figure includes hotels of all categories. To stimulate the growth of tourism, the government plans to issue permits for two or three gambling casinos in the Algarve. The government's final decision on the locations and the beneficiaries is expected by spring. The casinos presumably will attract a large number of the millions of tourists who come to

Portugal They totaled 2,511,000 in 1968, which was a had year because of the Paris riots; 2,785,000 in 1969; 3,343,000 in 1970, and the projection for 1973 is for 4,800,000. The government estimated

they spent \$250 million in 1970 and has projected that by 1973 tourists will leave \$385 million in Portugal.

But there is a hitch in the tourism figures-at least 50 percent came from Spain. The big spenders — Americans, Britons,

West Germans and French, who spend an average of \$16 a day a person—made up the bulk of the other half, Until now, the big money in (Continued on Page 14, Col. 1)

I ISBON.—This is a traveler's city, best appreciated from the deck of a boat sailing along the Tagus. Up above rise the old and the new buildings, clinging to the seven hills of Portugal's capital, which legend says, was founded by Ulysses, the most ancient wanderer of

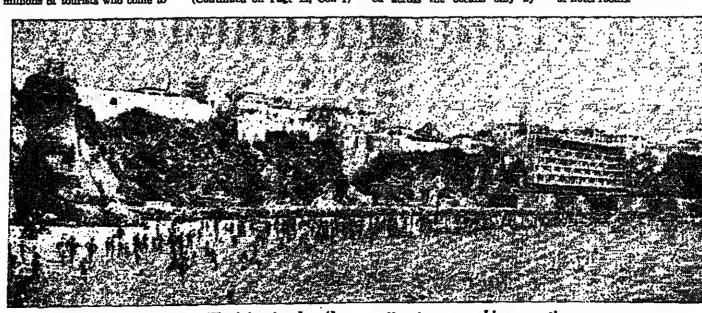

By Miguel Acoca

Lisbon gives the impression of having been made for people coming from somewhere, and moving on-to the British Isles, to Africa, to North or South America, to the rest of Europe. This was true when men moved across the oceans only by

water, and it's true today when men move mostly by air.
Lisbon is a natural refuge, surrounded by pleasant beaches.

This was rediscovered by royalty in distress. They were fol-lowed by the so-called international set and by tycoons. Today Lisbon—and Estoril

and Cascais, its two nearby resorts—grah tourists from all over. Government officials, who are trying to increase the flow of tourists, are pleased, but they feel that Lisbon is short of hotel rooms.

A beach resort at Praia de Albufeira in the Algarve attracts sun-seeking vacationers.

official, "are pretty well built up. We don't need new hotels there, but we need them badly in Lisbon itself." To remedy the shortage, the government has made Lisbon a priority development area and

of "not out of pity, but of desire."

A barge in the Lorraine serenely makes its way to the next port. Along with rail, air and road transport, rivers and canals still carry a good measure of traffic.

New Force in Regional Development of Lorraine

NANCY, France.—The latest N force in regional develop-ment in Lorraine is, of course, Jean-Jacques Servan-Schreiber
—both in politics and on the
commercial side.

Mr. Servan-Schreiber's latest book is "Pouvoir Regional" (Regional Power). His newest commercial enterprise is SEDE-Lorraine, whose alm is to help companies planning invest

ments in Lorraine. SEDE, which happens to have its offices in Nancy's Kennedy Building, has in addition to Mr. Servan-Schreiber shareholders from several countries in Europe and North America, according to François Pontet, the firm's chief executive of-ficer. The firm's capital is more than \$600,000, he said.

SEDE's major asset abroad is Mr. Servan-Schreiber. He is the company's representative outside of France, sconting for prospective investors in SEDE or Lorraine.

Industry, Resort **Expansion Along** Mediterranean

PARIS.—Tha "Mediterranean facade" of France is getting a major uplifting. Tempo is picking up on the work at Fos just west of Mar-

seilles, where 25,000 acres are being converted into a huge for petrochemical, steel and other major industries. Meanwhile, development of 120 miles of beach running

from near Marseilles west to the Spanish border is entering the eighth year. Several new resorts for agilors, swimmers and campers have been created at such sites as La Grande Motte, Barcares, Leucate, Gruis-san, Canet and Saint-Cyprien. This area, known as Langue-

attract 2,000,000 vacationers by 1980-85. Last year, 700,000 va-cationers came to the area. Government investment in the project, now about \$10 million a year, is to continue another five years or so.

Much of the government investment has gone into bring-ing new roads into the area. landscaping resort sites and programs to rid the region of mosquitoes.

One sim of the project is to rechannel to France the money that Frenchmen have been spending on vacations or sum-mer homes in Spain and other Mediterranean countries.

But he will have no role with SEDE in France, to minimize political problems, Mr. Pontet

SEDE's first achievement was to arrange, recently for tha hullding of the first Holiday Inn in France, in Nancy. The American company is the lar-gest of its kind in the world, with 1.300 establishments on five continents.

The Nancy outlet will open in a year and will have 250 rooms and an 800-seat convention hall, which also can be used by the university or other

Mr. Servan-Schreiber set up the investment in personal con-tacts with Kemmons Wilson, head of Holiday Inns. In the only activity that it has accepted ontside of Lorraine so

far, SEDE will help Holiday Inns build hotels in 18 other

cities in France. The idea for SEDE was announced last summer, during Mr. Servan-Schreiber's successful campaign for the National Assembly seat in Nancy of a Gaullist politician who resigned when it was announced that near the rival city of Metz.

Heads of industries who intend to settle in France seek, in the first place, land in large estates equipped to receive industries of all kinds.

Their next wish is that this land be located near a large city and be served by a very complete network of communications.

.They require competitive prices, fast, easy and ... simple administrative proceedings.....

They must find plenty of specialized labour.

However they are realistic and know it is extremely difficult to find a location offering all these advantages.

Mantes:1300 Ha (acres) is the largest site of the Paris Region planned for the development of industrial estates (750 Ha - acres) together with housing and recreation areas.

micetions network: highways (Lyons, 36 miles;

Brittany, to Alès, 400 miles from Paris in southern France, where coal mines are being phased out.

The west, southwest and central parts of France-almost half the country—ara areas where greater industrialization is sought.

Under the impact of government programs, a net gain of 200,000 new jobs was registered in western France between 1962 and 1968, against a decrease of 400,000 from 1954 to 1961.

To the north and east, the problems stem from the closing of unprofitable mines and uncompetitive textile firms. These problems have existed for years and are still virulent. In recent weeks, strikes protesting planned closings of coal mines have taken place at the pits and a major French textile empire, owned by Marcel Boussac, ap-

are high. The region, Mr. Risse-Raud explained, is dependent on the troubled textile industry and needs diversification. Further to the east, on the northern frontier, is another green splotch, around the Lens-

Béthune area, where coal mines are located. Another critical area is on the Belgian border at Charleville, the city that Ford-in a decision last year that touched oif a political controversy-passed up in favor of Bordeaux, where Prime Minister Jacques Chaban-Delmas is mayor. At Charleville, the foundries, tha traditional industry, are small and old and are no longer competitive.

"An advantage for investors in going to Charleville," Mr. Risse-Rand said. "is that there is an old tradition of industrial work there. The people know how to work and have a high degree of professional training."

In eastern France, in Lorraine and Alsace, there are numerous "mono-industry" towns where employment is based on failing coal, iron or potassium mines or on weak textila firms.

Worker Increase

Total employment in France is now 20,000,000. But by 1985, the work force is expected to rise to 25,000,000, meaning 5,000,000 new jobs will have to be created. With higher birth rates since 1945, some 800,000 young people are entering the labor market each year. In addition, the farm population is declining at the rate of 135,000 a year.

To provide workers with new skills in areas with declining industries, a large program of adult education and job training has been started. Eurollment has grown from 180,000 in 1966 to 500,000 in 1970.

In recent years. DATAR has opened offices in New York, Frankfurt and Tokyo.

Regional Planning For Orderly Progress

PONT-A-MOUSSON, France. -In any discussion of the birth of regional development planning in France, the name of Jean-François Gravier tends to come up, a little in the way Jean Monnet's does in talk of the creation of the French Plan. Mr. Gravier is not the "father" of French planning but in 1947, while a member of the Plan, as it happens, he did publish an in-

fluential book entitled "Paris et le Désert Français." "The book made people more fully aware of two fundamental things about France," says Philippe Rothéa, a regional plan-

"Paris was growing too large, becoming a ville monstrueuse,

everything was concentrated there. The provinces were being continually impoverished as Paris attracted all that was dynamic, the men of value, the capital."

An early step in the govern-ment's efforts to rein in Paris came in the mid-1950s when the first subsidies were offered for companies moving to the In the mid-1960s, another

more was to designate eight cities, or groups of cities, as "mé-tropoles d'équilibre" to serve as "counterweights" to Paris.

These eight metropolises are, clockwise from Lorraine: Nancy-Metz-Thionville; Strasbourg; Lyons - St. Etienne-Grenoble; Marseille-Aix; Toulouse; Bor-deaux; Nantes-St. Nazaire and Lille-Roubaix-Tourcoing.

Mr. Rothéa is on the staff of a planning-study group based here, midway between the twin capitals of Lorraine-Metz, industrial, stolid, Germanic, and Nancy, graceful Latin university

Plans and Funds

The government's aim for each of the eight metropolises is to provide planning and help with funding to improve the industrial, transport, communication and leisure facilities, Mr. Rothės said.

But the Lorraine metropolis also has an added role, aside from balancing Paris, of countering the enormous economie in-fluence of Germany's Saar region, he said.

The Lorraine metropolis is about 60 miles long north to south and about 25 miles from west to east. The population is 1.2 million and is expected to rise to 1.7 million by 1985.

A major improvement in transport in the area was the opening 14 months ago of Metrolor, a shuttle train connecting Thionville and Nancy via Metz and other citles. trains make the trip in an hour and one leaves from each terminal every hour.

A start has been made on superhighways connecting major cities in the area. Eventually the Paris-Strasbourg highway will traverse the province.

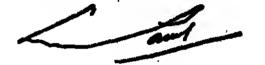

My name is Gaston PAMS.

I'm senator and president of the "Société d'Economie Mixte,'' which manages the area development at PORT-BARCARES.

I love my region, the Roussillon; but better than tell you about it on this page, I would like to show it to you, because it can very well tell its own story. Why not call or look in on me?

Palais Consulaire Quai de Lattre-de-Tassigny 66-PERPIGNAN (16-69) 34.98.88

Come on down and share with me some of the pleasant moments of the life we lead here. I'm confident we can develop some constructive business projects together.

generates new power for French and European Expansion.

The industrial development of the Seine valley has become European in scope. The port of Rouen possesses ell of the indispensable elements necessary to meet the new phase of industrialization through which the country la passing. It serves the neighboring Parisian basin of 12 million people with its first-rate means of communications.

A Multinational Industrial and Port Complex The Port of Rouen serves factories depending on waterway communication, both ocean and river, enabling them to receive supplies of basic commodities cheaply.

For this reason, the industrial sectors of the Port of Rouen Authority, situated between Rouen and the seaboard, enjoy considerable activity:

Main Sectors Represented in Ronen	Capacity	Netional Percentage
• Refinery	20,000,000 t	20%
• Fertilizers	2,000,000 t	20%
 Pulp and Paper 	700,000 1	20%
• Treatment of Domestic Coals	1,400,000 t	Ist

Other important basic activities are: metallurgic construction and machinery (Renault tubes . . .); electricity, ship-yards, timber for construction, foodstuffs, textles, building materials, petroleum chemicals, coal, gas, industrial alcohols, synthetic rubber, plastics.

The Fort of Rouen is situated in a region in which the leading French and overseas industrial concerns are represented. The industrial groups operating with a foreign capital majority number 104 from 12 different countries. Of the 500 leading American corporations (1) 21 are installed in the region; notably the groups in the order of importance: 2. 7 and 13 (petroleum products); 21 (electrical manufacturers); 22 and 36 (rubber); 49 (chemicals); 64, 71, 84, 92 and 130.

For this reason Rouen is situated in a particularly advantageous region for foreign investment.

A Geographical Situation to Exploit The Seine valley, principal link to the area of Paris, enjoys considerable advantages:

· From Rouen to Paris in 65 minutes by train.

• The Rouen Paris motorway (80 miles) now open. • Push barge convoys of 4,500 dwt ply the river.

New facilities for heavy unit loads (including containers) under construction.

From the seaboard to Rouen fully laden vessels of 25,000 to 30,000 dwt ply the Seine. In 1975 vessels of 35,000 dwt will attain the Port of Rouen and those of 50,000 dwt will be able to berth in the region of Port Jerome. The nautical characteristics of these sectors attract either average sized industries receiving supplies in the order of 1 to 2 vessels weekly (say from 1 to 2 million tons annually); or industries looking for sites near consumer centers or, again, industries influenced by the cost of transport. It is in the interest of such industries to receive their supplies of basic commodities as far inland as possible, particularly as no maritime freight surcharge is applicable in carrying carries un-river to Foren. cargoes up-river to Rouen. Sixty regular cargo services to 150 ports in 50 different products. Effectively, Rouen is the only French port in which

exports exceed imports.

Extensions of a European Market Scals Furthermore, the Port of Rouen is favored with facilities which strongly support its development; The present port potential represents more than 5,000 acres.

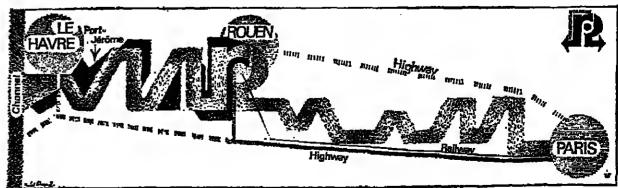

However, the surface set aside for Rouen's future port extensions will exceed 17,000 acres between now and the end

This exemplifies the brilliant and promising outlook of this section of the Seine valley.

PORTUGAL____

Algarve: A Burgeoning Travel Industry

(Continued from Page 11)

the Algarye has gone into land, infrastructure such as roads, sewer systems and electricity lines, and hotels.

One development, the Vilamoura, has reportedly spent more than \$12 million in infrastructure alone. At one time a U.S. company controlled a large percentage of Vilamoura, hut has reduced its interest to 12 percent of the 4,000-acre

complex.
Although Vilamoura has on its drawing boards several hotels, a marina and several selfcontained villages, so far it has completed a golf course, a motel a golf hotel, and several villas. A British construction firm, Norwest Holst, has bought land in Vilamoura, and is building a golf village. Houses in the village sell from \$17,000 to \$23,000, and follow the Moorish architecture of the Algarve, complete with the distinctive chimmeys of the

Tourist Villages

Although tourist villages appear to be the wave of the future in the Algarve—villas for retired people, villas for tourists, and villas for rich executives luxury hotels have attracted the large investments.
So far five have gone op, at a

total cost of more than \$30 million. The government, which has helped in the construction put up as much as 50 percent of the price in some of them. But It maintains tight control on sites. prices and decor. It also approves the designs.

Government planners, who determine the type of tourist they want in Portugal, have spread out the luxury hotels so that they more or less span the coastline and serve as magnets for additional development and

garve, on Prais da Rocha, long a fashionable resort; the Alvor, on Alvor Beach; the Balaia, at A'bufeira, probably the most swinging town in the Algarve; the Dona Filipa, at Vale do Lobo, and the Penina.

Penina and Dona Pilipa have 18-hole golf courses, and make a pltch for the American, the British and the European golfer All these luxury hotels charge similar rates, which are set hy the government. Price per per-son ranges from \$31 a day per couple, up to \$60 a day with meals included.

Developers and tourists complain that there are not enough of the so-called first class hotels where the rates are \$8.70 a day per couple, up to \$24 a day with meals. Government experts sgree, but say they don't want tha Algarve spoiled and overrun by thousands in search of a cheap hed and a cheap meal.

"We want to have a certain type of tourist," said a govern-ment official. "We want people who will be compatible with the easy ways of the Algarve, who want to play golf, perhaps gamhie, go sightseeing, and relax. We don't really want swingers and an awful lot of young peo-

Torralta

The government official's con-cept is reflected in the decor of the hotels, which is not quite Miami Beach. Only the Algarve Hotel has pretensions of flash, but this is muted by the management and the middle-aged

One of the biggest operators in the Algarve is the Interna-tional Holiday Club, which runs

PORTUGAL

OCEANFRONT PROPERTY

Torralta, a complex of 11-story apartment hotels in Alvor Beach, Torralta—or high tower construction nearby.

These hotels include the Al--sells the apartments, guarantees a 10 percent return on the purchase price, and is involved with Anglopor, a construction company. It not only has government funds behind it,

but Belgian oil money. The International Holiday Club has ambitious plans on its drawing boards, and is is forging ahead. Most of the apartment buyers, by the way, are Portuguese. Most of its guests are British, Americans and West Germans, followed by Swedes and French

In the spring it will inaugurate a brand-new \$4 million first class hotel oext to the towers. It plans an additional six towers, a complex of villas nearby, at Quinta Santa Filomena, and a development at Iroi, south of Lisboo. The company is also enlarging a hotel it owns close to Cape St. Vin-

So far—in hotels, apartment hotels and other developments the club has invested more than \$14 million. Its future plans call for an additional investment of \$11.5 million.

The club has been criticized for putting up the tall, Brazilian-styla buildings right on Alvor Beach. Its officials, however, defend their architecture, their moderate prices, and the business they bring not only to

the Algarve but to Portugal.

Like other big developers, the club grows much of its own food, bottles its own wine, and buys all its furniture in Portugal. It manages apartments of the foreign and domestic buyers, and promotes them. It is hard to determine ex-

actly how the club is able to pay 10 percent on the apartments, but Portuguese financial experts explain that its cash flow is swelled by the tax advantages given investors in tourism facilities and longterm government - guaranteed loans.

The government itself has made the cost of tourist devel-opment higher, which favors the promoters who got in early. Until recently, the toorist fund either made low-interest loans of up to 50 percent of the cost of the tourist project, or guaranteed a low-inter est, long-term 50 percent bank loan. Now the government will match the amount put up by Portuguese investors, and the rest must come from the foreign investor.

The interest rate has also gone up—from 4 to 4 1/2 percent in 1966 to 7 percent. Loans now must be repaid in 12 years, instead of 29 years. The investors who got in the Algarve in the beginning, however, had a field day — they received no-interest loans repayable in 29 years.

Occupancy Rate

Government experts figure that hotels in the Algarveand tourist villages-are profitable if they can manage to keep 55 percent of their rooms occupied. This figure includes the off-season, from December to March, when hotels are

nearly empty.

The experts and the promoters, however, figure that once the casinos get going occupancy will go up. They claim that right now the 2,300 hotels beds. and 1,680 beds in boarding houses, privately - owned inns and state-owned "pousadas" are not enough. An increase of 800 hotel beds is planned by 1972, and 1,500 more by 1973.

The promoters are looking beyond the hotel rooms and all the problems that go with running a hotel. They are trying to obtain government approval for the construction of more tourist villages. This way they can sell the houses to foreign or Portuguese buyers, and rent them when the owners are

AWRV. Most developers don't want to guarantee any return, but simply collect a fee for renting the villa and a flat yearly charge for maintenance. One such development is Vi-Izlara, prohably one of the most exquisite complexes of vil-

in the world. It sits facing the Atlantic on a promotory, the Algarvian-style apartments and villes facing the Atlantic. The prices: from \$30,000 for an apartment, up to \$80,000 for a villa. The weekly rents are reasonable, from \$50 a week per couple in the low season, to \$104 a week per person in the high season.

Labor Shortage

But there is a problem in the Algarve, a shortage of labor. Skilled workers are hard to find. and hard to keep, particularly in construction jobs. One reason is that the wages are low: \$3.50 a day. Skilled workers prefer to emigrate to France or West Germany, where the wages are higher and where they qualify for social security and other benefits.

The government, aware that the hig investment in hotels and tourist facilities requires trained help, has opened schools to train waiters, bartenders, chambermaids, cooks and room clerks. Some of them are encouraged to learn Enclish, the lingua franca of the tourist resort world.

All the activity has sent up the price of land, particularly along the shore, where lots often sell for \$8 a square foot and more. But prices away from the seaside, on the hills where the almond trees grow, are mod-

A few tourists, after a look et the Algarve, have decided to stay and become farmers. They figure the hotels and the tourist villages present a ready market. Some are experienced farmers, who know the problems of large tract farming. Others are amateurs, intent on riding the boom and making a fast fortune. One amateur sold a Stradivarius violon to raise the cash to get into the Algarve farming action,

The deep - ses fishing is excellent, and so is the hunting for rabbits and small game

The past, however, intrudes everywhere in the Algarve. There are Neolithic ruins, and relics and ruins of the Phoenicians, the Greeks and the Romans who were there. The Moors, too, left their mark, which survives in the architecture of the Algarve, and which is being perpetuated in the construction for the tour-

But more important than them all, perhaps, is the school of Henry the Navigator at desolate, windswept Cape St. Vincent. More than four centuries ago his ships set out to sea from the Algarve and laid the basis for the great land discoveries. Christopher Co-lumbus was in the Algarve, too. tha Cape Kennedy of the 15th

Above: Estoril's irreg-

At right: A Lisbon street scene.

Lisbon: Vast Area for Investment

(Continued from Page 11) ican high rollers to Estoril, where the blackjack and crap tables at the casino are espe-cially for them. They are lodged at the Estoril Sol Hotel, which looks as if it had been transplanted from the Caribbean.

Some of the Americans who come to gamble grumble that Estoril is not like Las Vegas, and that they would like to some racy girlie shows to spice the action. But Portu-guese officials say this is not about to happen. "We want to preserva Estoril's

aristocratic reputation," they Estoril, in fact, has more to

offer than the green baize of the gaming tables. Its beach is superb, it has a good golf course, and the view from its hillsides highlights the bay. Developers have built apartments which they sell to investors and which they manage and rent for the owners. Most developers do not guarantee a return, but they claim the demand is greater than the

supply. One of Estoril's decided attractions is that it lies between Lisbon and Cascais, a swinging fishing village where yachts are moored heside fishing boats with hull lines inherited from the Phoenicians. Cascais has no girlie shows, but it abounds m discothegnes, boites, inns, boarding and apartment houses and little restaurants that specialize in seafood.

The tourist who wants some thing more than gambling and swimming can enjoy himself quietly in Lisbon, wandering in the Low City, which is vague-ly reminiscent of Rio de Janeiro, its South American offspring, except that the gaiety. the noise and the fashionable dress are missing.

Then there is the old quarter, the Alfama, which is steep, and where the narrow streets are often joined by steps. Hang-

ing from balconies will be laundry put out to dry in the open air. At night its restaurants are lively, and the melancholy strains of the fado, played on a 12-string guitar and sung by woman, can he heard. Again, the Alfama is reminis-

cent of Rio, and once more the contrast between the parent and the offspring is striking. The museums are excellent but Lisbon's gem is the "Ado-ration of St. Vincent," painted by Nuno Gonzalves in the 15th century. The "Adoration's" six panels are among the world's great works of art. They are on view at the Museum of An-cient Art.

The Portuguese used to build castles the way they now put up hotels, and Lisbon has several of these ancient fortres-ses. One of the most rugged the Belem Tower, which stands at the water's edge on the Tagus.

Not all the hotels in Lisbon are new. There are some fine boarding houses in old mansions. One of the most attrac-tive is York House, an unlikely name for a former convent, where the owner will allow guests to explore secret pas-

Portuguese officials are well aware of Lisbon's attractions and want to package them the roulette and crap tables at Estoril and the disco-theques and restaurants at Cascais, and encourage tourists to use the capital as a base for visiting nearby attractions, which are slated for future de-

Until recently, the govern-ment was wary of tourism as an industry. Now it is committed to tourism, and it has invested large sums in glass and stone. To keep the tourists coming, it has allowed an increasing number of charter flights, a decision which has created a division within the government-between

who support the charters and those who argue that charters will cut into the profits of the Portuguese airline.

There is no question that tourists are helping Portugal's economy. Government officials expect that the demand created by tourists will keep Portuguese workers at home and reduce emigration to other European countries.

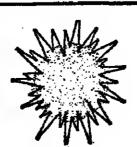

In 1971 the government will spend \$700,000 to train workers for the tourist industry. The amount is not staggering, when it is considered that Portugal will spend \$660,000—almost an equal sum—to promote the country as a tourist center. Officials claim that the training is few complaints on the quality of the service provided by the graduates of state-run schools for hotel help. The government has also begun universitylevel courses in hotel management and intends to have graduates participate in tha

To keep investors happy, the Tourist Commission has chang-ed its method of approving projects. Now, if an investor submits a plan and hears no word of approval or disapproval within 90 days, he can automatically consider that he has been given e green light.

The Portuguese feel confident that the country is fast becoming a big and profitable tourist center. They don't advertise the fact, but they believe that the racial and political problems in other countries that cater to tourists make Portugal increasingly attractive to investors and tourists alike. The country, in effect, appears to be relatively stable, and the gov-ernment, despite challenges by the opposition and a guerrilla war in its African possessions, is very much in control.

The present development plan ends in 1973. Officials claim they are on target and that "the boom is well on its

Italy

Mezzogiorno Bidding for Industry

(Continued from Page 11)

are very much like those cited by other companies that have settled in the Mezzogiorno, from the Rome suburbs south to Naples, Barl and Sicily. Franco Stanzani, sole administrator of McQuay Europa, half owned by McQuay of Minneapolis, notes the previously mentioned financial incentives that were taken advantage of when the company established in Ariccia-just south of Rome -in the spring of 1969. Now the plant, which manufactures cen-tral air conditioning systems, has made application for a loan to expand facilities by onefourth next summer.

"I don't say we didn't have problems (setting up in the Mezzogiorno)," Mr. Stanzani says. "But we didn't have big problems. IASM helped in setting up a cost-accounting system. We found a very stable work force, with little turnover. And we have been able to hire people from two nearby techni-

Special Schools

The two technical schools were not established by the Cassa Per il Mezzogiorno, but ten other schools in the south have been set np to train mechanics, machine operators and other skilled workers.

To create the skilled labor force needed in the Mezzogiorno

between south and north of Italy is to be closed, the Italian government and the Cassa Per il Mezzogiorno have taken some significant steps:

• The Ministry of Education has created 280 industrial professional institutes in the south to train about 30,000 school dropouts each year. Courses cover the normal range of basic technical training in such areas as electromechanical and radio technology. Of course, industries taking on such trainees bave to expect to devote some on-the-job training to them.

 The Ministry of Labor provides short-term technical industrial courses for almost 30,000 students a year. The courses are operated in coopera-tion with local industry and unions and they cover the range of basic industrial skills designed to fill local industrial needs. • The Cassa Per il Mezzo-

giorno and the Institute for Industrial Reconstruction bave sponsored the major type of industrial training found in the south. The 10 aforementioned schools have been established to fulfill the immense need for highly skilled and competent technicians required by the increasingly complex industries investing in the Mezzogiorno. These training centers are in Naples, Bari, Taranto, Chieti, Cagliari, Caserta, Syracuse, Cro-Reggio Calabria and

Although the training centers are under the authority of the

Cassa, control of them is shared with local industry and local and national industrial associations, with the cooperation of local chambers of commerce and local town councils. The buildings and equipment of the centers are provided by the Cassa and the courses usually last two years. They are operated, as much as possible, on industrial lines, with pupils working and training on the types of machinery they will use on the job.

The Cassa, as well, belps finance crash courses for workers at new factories or where retraining is necessary because of the introduction of new ma-

Trainability

Still, being able to hire skilled operators and mechanics is a problem at many plants. But the trainability of the faroriented labor force gets glowing testimonials from Johnson & Johnson and McQuay Europa. At Klopman International too, the director of advertising and promotion—Ned Garvey -notes that when the Klopman plant in Prosinone began production in 1968 "we found people who didn't know a loom from a womb." That can be fatal to a company prodocing polyester cotton. "Now." Mr. Garvey says, we have extremely efficient production." The plant's supervisors were sent to the United States for training and they, in turn, have trained others on the

Investment figures perhaps can reflect the confidence of Klopman in the efficiency of production: Investment has been well over \$15 million, Mr. Garvey says, "And we have increased production facilities 43 percent since 1968. We have about 1,000 employees, which represents a 20 percent increase over the original work force."

While the caliber of the iabor pool certainly needs uplifting, the quantity of manpower is unequaled in Europe. Unfortunately for the Mezzopiorne for the Mezzogiorno, but

Vital Purpose

created them cannot.

Venice:

fortunately for investors, the immense oversupply of labor is estimated at between a million and two million persons. What's more, the size of this oversupply expected to increase during the next 20 years while in the rest of the Common Market the

.Comparisons

become tight.

manpower situation is likely to

The size of the surplus labor force, of course, dictates a low cost of manpower. According to economic intelligence unit, the average gross bourly wage in manufacturing in 1967 in the Common Market comthis way: Mezzogiorno \$.49, Italy \$.71, France \$.85, Netherlands \$.98, Belginm \$1.04. Germany \$1.17, Luxembourg

Labor may be the most important resource in which the Mezzogiorno is richer than its European partners, but its other resources compare favorably, at the very least, to those of Common Market members. Foremost of these other resources is space, plenty of it and cheap. Much of it is located near excellent ports, airports, railways and modern motorways.

Rasiom, a refinery in Augusta, owned by Standard Oil of New Jersey, notes that the main reason for being in Sicily is its position adjacent to one of the

finest harbors in Italy, and its relative access to the Mideast oil. The harbor of Augusta, which is used by the NATO base, is viable virtually every day of the year.

The vast Frosinone plant of Klopman International, one of many industrial concerns attracted to the Messogiorno.

Klopman, too, found its location excellent. Mr. Garvey says: We're in the right place. We've been able to get plenty of land (in Frosinone) in order to build a total humidity and heat-con-trolled plant. We start with raw fabric and finish the polyester cotton completely under one roof. That takes space."

And transportation? "We found that the road networkmost of our shipments are by truck-is a pretty efficient system of traffic," Mr. Garvey

Inquisition in its brutality, appocrisy and secret crimes," writes the historian E. A. Gnikind.

Yet the physical order, the livability, if you will, created

by Venice was even better than

its makers knew. In fact, as Lewis Mumford has pointed out, medieval Venice brilliantly anticipated the best inventions

of 20th century planning." There is, to begin with, the

trians and vehicular, or rather,

boat traffic. The Grand Canal

boats

is the city's best artery, taking

progressive highway engineers.

"The flouting of this

says. "We ship some to South Africa and we ship some to Greece. But about 75 percent of our goods go north. As long as we ship within the EEC, the transportation costs are not prohibitive."

The main roadways of the Italian autostrada system are complete and it is possible to travel from the Mont Blanc tunnel near Aosta in the northwest via Milan, Florence, Rome to Reggio Calabria at the toe of the country. More than half of the Adriatic motorway, joining Bologna and Bari, also is operating and the remainder is scheduled for completion by next year. The west and east coasts are also connected via auto-

and a connection between Ross and Pescara is almost equiple With the main network nearly finished, it takes only a dec to deliver goods from the southern peninsula to any of the main cities or towns of Italy.

And there are the railways most of which are electrified or equipped with diesel engines. Discounts for transporting goods in the Merzogiorno, to or from plants, are available. And largescale users of the railways can negotiate special prices for moving their goods.

There are 18 airports available to civil aircraft in the Messogiorno-Rome, Naples, Palerma and Catania being the main toternational fields. A new inter-(Continued on Next Page)

be preserved not only as an incredible art museum but also as the incredibly lovable and ideal city that should have long ago inspired the urban design of other cities—but never did? Or will its preservation merely spur further hectic growth and crowding, vulgar commercialization and efforts "to bring Venice up to date," as has been suggested, as a Venetian Disney-

Decay Danger

The more immediate danger, to be sure, is not 'progress' but decay. It is not only that Venice will continue to sink. but also that it is flooded. shaken in its foundations by the wake of motor boats and chemical erosion. With financial and technical belp from all over the world these problems are now being attacked.

turbulence that shakes the crumbling walls.

Venice will also have to ban the use of noxious fuels whose sulpburous acid, combined with the salt in the air, corrodes Venice's famous statuary and carved stone. Some of the decay can now be arrested polyester resin, says Prof. Pignatti.

Restoration Plans

But restoration on any significant scale is just beginning. It is largely sponsored by the UNESCO Save Venice Campaign and the Venice Committee of ... the International Fund for By the end of the 17th cen-

tury Venice had long passed the apogee of its political, milltary and commercial power. But it was still at its creative best, no doubt the most beautiful city in the work, rivaled only perhaps by Peking. Its artistic glory, to be sure, did not solve its social problems. Were they ever solved? "The beauty, the brilliance, the artistic grandeur of Venice had to be paid for with despotism, corruption, slavery and the horrors of a tribunal that could successfully compete with the

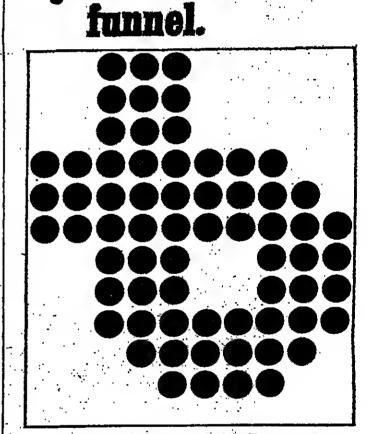

that have been the victims of their complacent malpractices." Special Zoning

Equally important as planning principle that also grew out of Venice's island location is its division into distinct neighborhoods or parishes. The tourist usually fails to realize that the pattern of St. Mark's is-repeated on a smaller scale in each of them. Each has its square, its fountain, fis church, its school and often its guildhall and each—this is important -has its own share of palaces and wealthy homes. Each there-fore also receives its share of municipal attention and services that the rich usually enjoy. There are no neglected, poor neighborhoods that turn into

Venice furthermore has what Mr. Mumford calls "functional zoning," that is, each islandparish is devoted to a special purpose ship building glass blowing and so forth. This principle was still carried on in the 19th century when the Lido became a seashore resort.

What held the neighborhood and parish people of Venice together as one inordinately creative community were their city-wide ceremonies. Venice is designed as a festive city, a city of public celebration, of color and vitality and music, of urban airs that could not help producing great art. "For all its vanity and its villainy," writes Mr. Mumford, life touched some of its highest moments in

Mezzogiorno: Invitation to World Industry

continental airport is planned for Calabria, and national and international fields are being built to planned it leads are being built to planned at Maples, Potenza, Agrigento in Sicily and Olbia on Sardinia. Although Rome is officially just north of the Mezzogiorno, it is the obvious main air entry point to the south, with regular and frequent connections to centers throughout the world. Air freight facilities are available at all Mezzogiorno airports.

all Mezzogiorno airports.

Shipping by sea, of course, is one of the great advantages of being in the Mezzogiorno. Besides domestic shipping up and down both sides of the boot on a daily basis, the ports of south Italy are the closest to the East Mediterranean and African markets.

Growing Market

Rasiom transports 90 percent of its produce by ship—45 percent of it for the domestic market and the rest to north Europe. It uses trucks and railways for shipping within Skily. Johnson & Johnson ships by truck, mostly. Although most of its products go to Rome and north Italy, it is developing a

market in the south. And it can buy 70 percent of its raw materials from within a 200kilometer radius of its Pomezia plant.

General Instrument Corp. in Naples has its main markets in Europe, and—because of the lightness of its electronic components—ships 80 to 90 percent of its goods by air.

The market within the Mezzogiorno itself is growing, with average incomes of the 20 million residents having risen by about 54 percent between 1959 and 1968. And in all of Italy, consumption spending by the 50 million Italians has risen by a quarter between 1963 and 1968, the economic intelligence unit reports. Further, being in the Common Market means that investors in the Mezzogiorno can sell to a tariff-free market of 185 million persons while using the financial and resource advantages available in

southern Italy.

Incomes are rising, too, in the heavily populated area of the Mediterranean, and the rapid industrialization of North Africa and the Middle East requires considerable imports of manufactured goods.

Another benefit to Mezzogiorno investors is that by being in the EEC they can qualify for import tariff reductions under agreements with Greece, Turkey, Lebanon, Israel, Tunisia, Morocco and Algeria.

Key Incentive

All of this—the resources, the incentives, the market potential—would seem to be enough to insure the successfulness of industrial investment in the Mezzogiorno, providing the company also has good management techniques and a potentially profitable venture. Obviously, without those two qualifications, no degree of incentives are worth considering.

Once the possibility of settling in the Mezzogiorno is considered, however, there is still another plus factor: IASM. Its staff can trim red tape to a minimum, from the initial contemplation of investment, to the locating of land, to market analysis, to contact with financial institutes.

And, as the economic intelligence unit puts it, "This... is one of the most significant invisible incentives to investment in the area, especially by foreigners."

Sicily_

(Continued from Page 11)

and historical interest, but there was much more—a modern hotel infrastructure accommodating great numbers of travelers, and the ease with which those areas could be reached.

The problem of bringing tourists to other areas of the Mezzogiorno, including Sielly and Sardinia, has not been in creating points of interest, but in creating the means to bring them to the riches that exist and to accommodate them when they arrive.

The Cassa Per fl Mezzogicrno, the Italian government and local enterprise, has opened up many new areas in recent years by creating railway connections, airfields and highways. In Sicily, the areas most recently being developed for tourist use are the south coast between Selinunte and Agrigento, which contains a picturesque sandy coastline and outstanding Greek architecture.

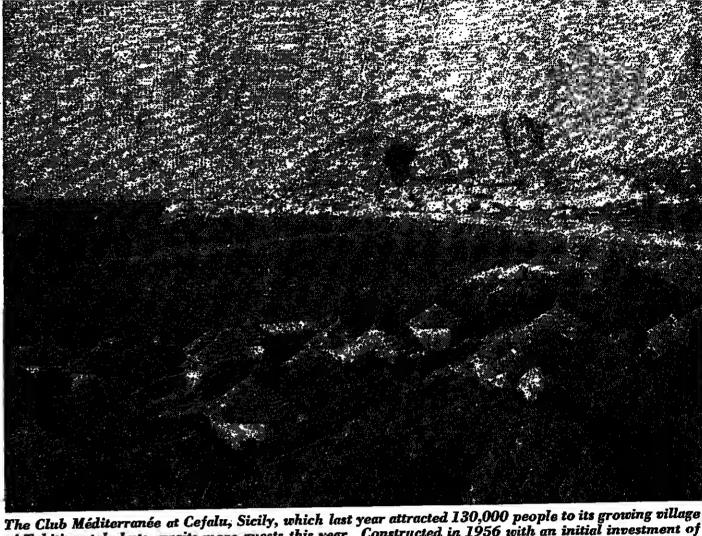

Focal Points

The famous ancient Greek city of Syracuse on Sicily's east coast, below Catania, also has been earmarked for tourist development, along with the Lipari group of small islands, including Stromboli, off Sicily's northeast tip.

Still other areas are planned for development, including the norm coast of budy, with its beautiful village of Cafalu. Already developed in Cafalu is one of the many worldwide encampments of the Chib Méditerranée. In Cafalu, the club has one of its typical layouts, village style, of Tahitian-style huts accommodating a total of 1,200 processes.

Jean L'Allimont, director of Club Méditerranée in Italy, says that the Cefalu installation has been so successful since it was begun in 1956 that a modernization is now going on at a cost of about \$333,000. The Cassa Per il Mezzogiorno, as it did with the initial investment of about \$2 million, is providing the avenues of finance for about 50 percent of the modernization cost. Club Méditerranée has five such installations in the Mezzogiorno and is building six new ones. "We are the higgest hotelier in Italy," Mr. L'Allimont says proudly.

Most of the club's business is provided by tours which its agents arrange in other parts of Europe, including north Italy.

The Club Méditerranée at Cefalu, Sicily, which last year attracted 130,000 people to its growing village of Tahitian-style huts, awaits more guests this year. Constructed in 1956 with an initial investment of \$2 million, this resort is still expanding and modernizing at the rate of \$333,000 in 1971 alone.

And the regional government of Sicily helps by paying 18 percent of the cost of charter flights emanating from Paris and Switzerland, Mr. L'Allimont says. Last year, he notes, the clob brought 130,000 persons to Cefahi, 90 percent of them

To the long list of Sicily's natural resources, Mr. L'Allimont adds another: "The good people of Sicily, with their great sense of hospitality, are truly

Shifting Pattern

The growth of tourist interest may be seen in figures provided by the Institute for Assistance to the Development of Southern Italy (IASM), which found that the traditional tourist regions in the Merzogiorno (Naples, Salerno, Catania, Palermo, Messina, etc.) fell behind the other southern areas by 1968 after having attracted the bulk of the market in 1960. Under what IASM labels "nights spent" by tourists in 1960 the traditional areas recorded 6,656,093; the other southern areas 4,874,239. By 1968, the traditional areas recorded 7,143,771 and the other areas 8,376,326. That is a jump of more than 71 percent for the previously untraditional areas, and an overall rise in tourist "nights spent" of about

Ironically, Sicily did not belp the Mezzogiorno make a good showing for the comparison. In 1960, "nights spent" amounted to 3,919,408 in Sicily; in 1968, it the decline, according to IASM:
An insufficient supply of accommodations as a whole, and a poor distribution of the kinds of accommodations, which were largely in the topmost and lowest categories of hotels, rather than the intermediate levels most frequently sought by tourists. There was, however, a marked uptrend in Sicily's inflow, IASM says, in 1969, but exact figures were not available.

Claudio Alahique of IASM's to say that large measured in the sistence to the siste

tourist department, sees a great deal of initiative in the number of hotels and motels built in the Mezzogiorno between 1963 and 1980. "The number of beds between those years will represent an increase of between eight and 10 times," he says. If he proves accurate, it is safe to say that IASM will bear a large measure of the credit.

"TASM is giving free assistance to interested investors," Mr. Alahique says, "beginning with the identification of suitable land." There are 29 preferential tourism areas in the Mezzogiorno, and the general plan of developing them has been prepared by the Cassa Per II Mezzogiorno. Besides the land already identified as suitable, "TASM is always scouting to find more," says Mr. Alahique.

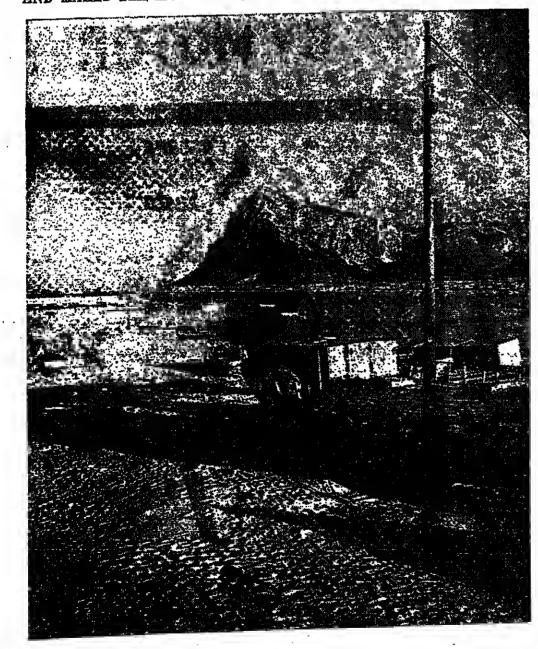

That is not all, IASM also:

• Ascertains what may be most appropriate and economically attractive for an investor according to his objectives and preferences, his available capital and his experience in construc-

Contacts groups and organizations (Italian and non-Italian) to promote the influx of tourism into the area of invest-

laborative and operational levels, in the association of land-owners, builders, hotel proprietors and others to ensure a practical integration of investment planning ability to afford the maximum guarantee of re-

the maximum guarantee of return on investment.

How is it doing so far? "From the inception of the policy of developing tourism in the south," Mr. Alahique says, "the government has helped finance the construction of hotels containded to the ball of the Merican 100,000 beds to the ing 120,000 beds in the Mez-zogiorno." Altogether, the present total of tourist beds in the south is 213,000, he says.
"In general, investors for the

most part are from Italy; in part local people, in part from central and northern Italy." The foreign investors, Mr. Alahique says, are mostly from France, Sweden, England and

Germany.

Evidence of the expansion of tourism in the Mezzogiorno as a whole is seen in the growth of touristic investment in the region. Financial commitments by the Cassa to hotel develop-ments in the period 1964-1968 totaled \$165 million in loans and direct investments, equiv-alent to 65 percent of Cassa commitments to hotel developments in the entire period of 1957-1958. Total investment last year in the Mezzogiorno tourist sector were almost \$200 million, of which the Cassa's share was about \$38 million. Of that \$14.40 million was invested in works of artistic and archeological interest and \$24 million was spent in backing private investments in hotels and ancillary services.

The financial incentives offered in the Mezzogiorno are

♠ A 10-year exemption on corporation tax for new ventures in the hotel sector. ◆ A 10-year exemption from income tax for new hotels. For those that are enlarged or

converted, the exemption applies to that portion of the increased income deriving from the modification. • Loans of 3 percent for up to 70 percent of investments

the investment, and its location. . Grants for construction, conversion or expansion of buildings used for tourist activity, up to a maximum of

15 percent of total investment. Tourist investments in Sicily are given added incentives by the region. These include loans provided wholly by the region and not cumulative with loans provided by the national gov-ernment. The loans are also for up to 75 percent of the total investment, depending on the

size, character and location of the investment. The interest rate is 1 1/2 percent a year on the loans which have a life of 20 years for fixed assets and 10 years for decorations and furnishings.

The region of Sicily also provides grants paid in install-ments for the purpose of reducing to 1.5 percent the annual rate of interest on that part of any loan obtained on the basis of national laws. There are other grants available, concerning infrastructural facilities

and to offset special taxes.

Altogether, that seems like a tot of incentive. But develop-ment of the Mezzogiorno is a priority effort. Tourism means business and of course is a potentially large contributor to the area's economic developThe south of Italy is just beginning its growth period in come. And that growth may indeed be swift, not simply because the Mezzogiorno-and Sicily in particular—have the necessary natural equipment for tourism. But because of (1) the increase in motorized tourism, (2) the construction of a service complex that is providing easy accessibility, and (3) the fact that northerners can no longer find uncrowded beaches under a warm sun and with a cool breeze, or find ski runs with room to slalom, elsewhere in

MEZZOGIORI

THE LARGEST INDUSTRIAL DEVELOPMENT AREA IN EUROPE

Mezzogiorno's growing up

After twenty years of government interventian and todustrialisation policy, the hernoflerne-namely the Italian penintula south of Romo pins the Islands of Sielly and Bardiniable no longer viewed as an underdeveloced area. Its image, as well avity reality, have changed. Yet many companies operating on a worldwide scale do not consider it either as possessing all the characteristics of a developed country.

In a way, one could assimilate the Messengicuro's present situation in the peculiar conditions of a teco-ager whose voice sounds at times like a men's and at others like a child's. The overall growth achievements attained over the last two decades are indeed strikingly impressive to any respect—be they considered with regard to the GNP expansion or the actedy growth of investment ootlays and persunal consumption.

However, by the elde of designed industrial areas where the Govecoment's policy has directed new investments by grantice higher incentives and by concentrating poblic spending, nities areas have remoteed backward and their human resources have continued to be drawn lowards the most advanced regions in the country or abroad. Thus, some smaller "Mezzo-gocoos" were created within the Mezzo-gocoos" were created within the Mezzo-gocoos were created of a good is aireedy in sight, for the region as a whole has grown to the point where it cannot remain still, and it spoers ready to move faster and meet successfully a decisive decade at accomplishment in its growing-up process.

Programmes and prospects

Government extraordinary loterren-tion by which hasto infrastructures and important steet and petrochemical plants were created, is now tackling the problem of establishing a solid network of manufacturing industries. The establishment of isrge and small such anterprises to clearly vital to such enterprises is clearly vital to sliminating memployment, which is no of the major obsiscles to ocono-

ile development. In its endeavours to promoto mann-

mic development.

In its endeavours to promoto manufactorine, the Government has chosen in seck also the collaboration of private enterprises and aegoliate with them the shaptog of integrated todestrial complexes in the South. Such negotiations involve the great of incentives as well as of specific tofractricteral benefits.

At the same time the Government is planning for the next five years (1971-1975) a mastive overwhole investment of state-controlled compenies of the IRI. ENI and EPIM groups, for a total of 1.2 billion deliars. It one compares these figures with those of the previous five year period (82.7 billion) one may measure the size of the previous five year period (82.7 billion) one may measure the size of the previous five year period (82.7 billion) one may measure the size of the five investments in the steel industry, 92% of those for chemicals, 83% for electrolles and 52% for the mechanical todustry will be placed to the South. This is obtained by location the greater part of the investments in new infinitives promoted by state-owned groups in the South, while in the Center and North only modernizations and expansions of their existing installations are entitled.

Therefore, no one band there will be further investments is steel and petrochemicals, and on the other hand so importated breakaway from tradition will take place as regards mechanical and other manufacturing industries.

With the enlarging of TTALBIDER's

chantes) and other manufacturing industries.

With the enlarging of TTALSIDER's Taustin facilities now under way, with its subsequent redoubling, with the construction of a now larger

the construction of a now larger stock center in Calabria and improvements in the Hagnoli (Naples) lacilities, steel production in the Measociarus should approach is million tons when the programmo is completed and the etect from the Measociarus will be a flokkhed product ready to be utilitied on the spot by other industries without turther processing tabing place cleawhere in the North as ill need to be.

The ALFA ROMEO automobile plant avar Naples, which is to be completed within 1872, by only the best known example of a best of investments plaqued by other companies of the IRL Group, whose under way projects concern alto the electronic and acrespace industries. Some of these projects involve join ventores of private and state controlled companies, as it is the case of Silmens. DATA, a company in which Silved in the produce electronic components, equipment and systems, and of AERTIALIA, a FINMECCANICA-FIAT joint vectore for assembling advanced-design aircraft.

In the tield of heavy manufacturing, the decision of AIPA ECOMPO of building a plant in the South has been followed by FIAT investment projects, involving out only simple assembly plants if alternoon in alternoon to the production of other mechanic equipment, engaging the company in a diversification programms concerning the seriors of acrespace and earth whowment. The location of these new FIAT plants will be in the already developed area of Barn and Brindist where, years ago, the EEC had studied the creation of a series of mechanic industries.

Another Italian industry which is sow going to expand in the Bouth is that of relectival appliances. The market of these products, in fact, has still a large expansion capacily in the Bouth. Tho sales of television settle, religious of such a Reading company as INDESTI which is following IEE items to be been producted in Campania.

Finally in the field of petrochemicals the recently accomplished in the south recently such as a plant and the sale of the past, they are not having our interest of the sove progres

industrial development of the entire

Memoriocon.

It must be noted that oow, more than ever before, the projects of the feading private and state-award companies do not stand alone and that if in the past investments did not always induce other investments there are already many blots indicating that from now on the situation

is going to change. In fact, as it was mentioned above, some of the new projects involve types of prodoction requiring ancillary todustries or foctoring further processing. Thus, the path laid down by large companies is being followed by a host of others whose size and prodoction interests are most varied.

Foreign business in the Mezzogiorno

Whenever reference is mide to private enterprises, this is intended to include also foreign companies, which have taken their share in the industrial development of Southern Iraly

Admittedly, to a few instances for-eign ventures have not been viacosa-ful Poreign business fallores and closing-downs to the South have been very much and widely publicized—

Nan sites, corresponding to a large number of industriol parks dis-tributed over 47 "Arcas" and "Nu-ciel of Industrial Development" where higher incentives and infra-structures specifically geared to fec-tories' requirements are made avail-able.

The concentration of investments in these parks has been layoured in order to void the dispersion of the afforts, and to itselfitate the realization of the projects. Especially now that beole geograf infrastructures bare here brought op to a European attendant, the "Cassa per if Metzogiorno" can devoic tunds and shift most of the ale to the development of Industrial parks so that a more direct type of infrastructural tacilities is immediately available to new factories locatiog within these areas. Many of the most important ones have sequired special testures which make them particularly emitable for specific eategories of todustry. For instance, the area of Bart has become a cootre of engineering industry and the area immediately south of Rome includes primarily a wiogrange of relatively light todustries The concentration of investments

of art, ample and nover jammer motorways, a cost of living below that of northern Italy and the rest of the REC are major assets of the region

At the same time the absence of great problems of emerstion and polintion enotribute to melniala-ing a good environment also for

Tourist todustry, on the other hand, is particularly favoured by the above mentioned climats and envicooment conditions. Besido oreas where the tourist lodustry is traditional new ones have been selected where the development of tourist lacilliles is particularly encouraged, incidentally, it must be noted that a wide range of incentives is provided niso for investments in the tourist sector, for the establishment of botels, youth hostels, restaurants, skillits, and other complementary ecolopment; loans covering op to 70% and grants for a maximum of 15% of total tovestment are made available. In fact, during the last two years, Italian and toreign tovestments in the acc-

especially so where American toterests were at ataka, as to the case of CELANESE, EPIEEM or RATTHEON. Yet, in spito of the big noise which has been stirred up about such failures, il cannot be denied that they add op out to a tiny minority of the total number of foreign firms dolog business in the Metaseforks and to a fracilos of the capital and entreprensorial resources devoted by them to this porpose.

On the whole some 200 foreign firms.

to this porpose.

On the whole, some 200 foreign firms
—of which about one half Americanare operating to the Messoriarac's
maneascining industry, whether
through entirely-owned subsidiaries
or by means of joint-wentures with
Italian partners. Interestingly shoogh,
among the latter quito a few bare
been formed with Italian slate-wood
groups: this is be case, for instance, of
AJINOMOTO. FIRESTONE, LIBBEYOWENE, MASSEY PERGUSON, JAEGER. METALLGESELL & CHAPT,
WESTINGHOUSE, Jant to mention
some of the foreign companies which
have astablished joint-ventures with
the EPIM group.

Industries where the influx of for-

Industries where the laftux of fdreign tollialites our proven to be comparatively most sizable are those of oil products, cosmeties, detergents pharmaceutical goods, ball bearings, photographic supplies, flat glass, household appliances and tyres.

household appliances and tyres.

At any rate, the above mentioned sectors are but a few within the wide and varied range of manufacturing activities which to reign firms operating to Boutheo Italy are spreading over. The revent inflow of newcomers as well as the appaneloo odderway of foreign-controlled manufacturing facilities—CIBA, GENERAL CABLE, GOODYEAR, HENKEL, HENSEABERGER, ITT, ELOPMAN, WILLEROY & BOCH, WALWORTH, to mention just a twe—is a meaning-tol eign that the scope for tovestment opportunities to be selved upon in the Mexenforme by Eucopeao and American companies is fac from boing exhausted.

Reasons for a choice

Nevertheless, it seems possible end worldwhile attempting to touch upon some of the major elements which must have oeen taken into account, and anywoy should be given consideration by industrialits choosing in locate in Southero Italy.

• A lasting and coordinated Government intervention. This is pleaged in last to reach within 1880 a close balance between economic conditions in the Mexicogiorno and those in the rest of this country, by means of extraordinary investment programmes administered by one special agency, the "Cassa per il Mexicogiocoo" (namely Fundtor the South. Now these programmes are going to be reshaped and relaunched on a new basis which will take into account the "Regions" which have come into existence with last June's elections. The Minister of the Budget. Mr. A Cloilitti, has announced recently on investment programme for the Bouth amounting to T2 billion dollars, which should create one million new jobs in ten years outside the negricultural sector end permit a 7.2° annual growth rate in the South's Growth rate for the Rallian GNP.

A favourable geographic position

e A favourable geographic position in the heart of the Mediterranean 1130 million people) and within the EEC 1185 million people), being peographically enhanced as a ennaquence of the rapid improvement of trensport and communications in-

Instructures.

In effect the Italian motorway system hav reached the South. Southern railways harn been modernized, eliports and ports have been, or are being enlarged and boilt acow, telephone actomatic connection is extended to the entire national lerritory and will ason reach out the whole of the EEC Already as of oow it takes not more than five to els days for a road freight to reach Northam Europe from the Mezzogiacos and tour to five days to reach dioser desiliations such as Munich and Barcelona, while conteinerization is well under way both on rail and sea transport

for consumer goods and building trade accessories,

a A rapidly expanding focal market at 20 million peopls which consti-tutes a tound basic for the con-quest of larger national and inter-national markets of both consomer goods and totermedistic todostrial products needed for the very indus-trialization process underway.

trializatian process underway.

The average income to the Sooth, between 1951 and 1969, has more than doubled, and it is close to appear on the other band, gross fixed investment spending is currently running at a level of aimost 85,000 million a year, thus incloding so important share of total demand for plact, machinery and equipment in Italy. Yot, in spite of the past progress, there is still room for expansion before Italian or European levels are reached. Average personal expeculiere in the Bicxzeriscoo, in tact, is still only about three quarters of the national average and compared with the rest of the ESC it is even lower.

. A large labour supply which now

compares most favourably and will do so aven more to the fature with general contrasting conditions in other EEG countries. On the basis of an OECD forecast it can be extimated that, up to 1989, almost 40% of the EEG colditional labour supply will originate from the Mezzogiorno, and only in Italy berious ennditions of isboor shortage will not be faced Even at pressor many industries in Northern Italy and io other European countries make on extensive ties of Mezzogiorno's labour, Lasour pools made of Italian imostly southecored immigrates in some European countries are reckened as follows: 760/800 thousand in West Germany; 200 thousand in Beigium: 600/700 thousand in Elegium: 600/700 thousand in Elegium: 600/700 thousand in Ericand: 180/200 thousand in Elegium: 600/700 thousand in Elegium:

tor of tourism have shown a sub-plantial upsorge.

e A generous and compirte package of incentives, localudog as major items, a ten-year corporate income tax exemption, loos-term loans at low rate of tolerest covering up to 50°, of total lovestiment costs, and eash gracts up to 30°, of the same, Puriber, Sidly and Sardinia provide additional incentives over and above those granted on the mala-jand.

Though in other European develop-ment areas more liberal induce-ments are granted with regard to some specific features, it must be recognized that, as a whole, the in-centive conditions provided for in couthern Italy are unmatched in the EEC.

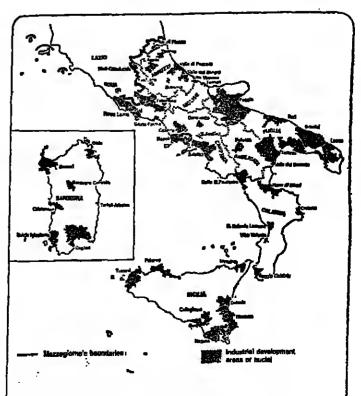

Puriher, foreign busicessmen are entitled on a fully equal foot as domestic occs to becetil from the incentive package. In particular, they can obtain valoable dissistance trem a special non-peofil organization, IASM, which can help them, no a free and confidential basis, to gather relevant market and alto before the most of the package. to gather relevant market and sito information, to get in touch with the different ageodes responsible for the incentives' administration fauch as the already mentioned "Casas," innancial institutions like investment, IFFIS, CIS, equity-participation organizations, ecotral and local outherities, etc. 1 to file applications and meet prescribed termalities—to general, that is, to get to with a minimum of red tape.

Summing up

To enoclude, on many and different accounts it seems reasonable to malotain that the Meszogiorno presents itself as an emerging land of iodustry's foture in Europe. As the widest Eucopean development area, it surely has posed, and still atmehow poses. A formidable challenge to government and business alike—bot, as government plenners and tar-sighted businessmen will know, challenge is the best nurturing ground of profitable opportanities.

Por, to quote a report (The Meriagiorno: Investment Prespects for the
Sevenica) recently released by the
BOONOMIST INTELLIGENCE UNIT:
"There is a great number of excellect
reasons for investing to the Meriagiorno, (...) While the advantages
on offer may not necessarily coincide with the requirements of all
invertors, the advantages will be ecupelling enough tor most. There is
no denying that all potential investors
should give the Meriagiorno the most
sections consideration when deciding
on plant location. The combination
of savantages is univalled to Europe and too important to be
ignored."

THE MEZZOGIORNO AND ITS REGIONS

There are no flies on this worker... and there are plenty like him, down in the Mezzogiorno, where sizable factories have been - and still are - going up. Recognize the names? AERITALIA, ALFA ROMEO, EATON YALE & TOWNE, ENI, FIAT, HENSENBERGER, ITALSIDER, KLOPMAN, MONTEDISON,

NESTLÉ, OLIVETTI, SQUIBB, TEXAS INSTRUMENTS, VILLEROY & BOCH... Here's where labour's more plentiful, and environmental,

economic and production conditions are best. Here's where the Italian government has created efficient infrastructures - ports, airports, motorways. Here's the meeting place

of the sea and air routes from the Common Market, Eastern Europe and the Third World.

And an organization you can count on for your investments: let IASM act as your agent and adviser. Write to IASM, and they'll tell you

about the conditions you'll be working in. the easy-term loans you can get and the financial contributions the Cassa per il Mezzogiorno makes to new investments; ~

they will explain the tax benefits you're eligible for, and steer you safely through the red tape. IASM is an organization offering free services to entrepreneurs. Invest in what's new, invest in the Mezzogiorno. The emerging land of industry's future in Europe.

A point most novice players would overlook is illustrated by the diagramed deal, reported by the English writer G.C.H. For North-South reached an optimistic game contract in notrump largely because North responded two clubs to one diamond. He was no doubt hoping to stop in three clubs, but South not unnaturally persever-

ed to three no-trump.

An American player would no doubt respond one no-trump with the North hand and end in a part-score. South would then have an interesting choice between passing one no-trump, rebidding his diamonds, or making an aggressive reverse bid of two hearts

West led the spade four, and North put down the dummy without much confidence in his partner's ability to make the game. South overtook dummy's spade nine with the queen, a key play made in the interests of preserving potential entries to the dummy. The club seven was led to

dummy's nine, and East chose to win. He shifted to the heart jack, and South put on the queen with good results. To establish and use dumny's

clubs South needed two entries to the dummy. He found them in the spade suit, by leading the three and putting on dummy's ten when West routinely played the deuce. The lead of dummy's club queen drove out West's king, and South had 10 tricks. East

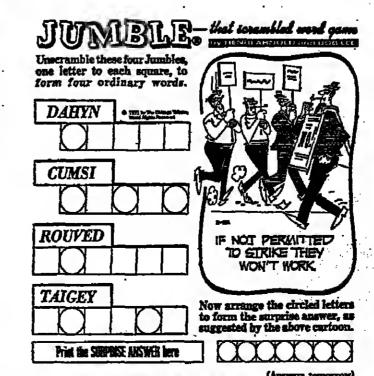

was quick to point out his partner's error.

STILWELL AND THE AMERICAN EXPERIMENT IN CHINA

By Barbara W. Tuchman. Illustrated. Macmillan. 621 19. 11

Reviewed by Christopher Lehmann-Haupt

DESPITE certain large obstacles-chief among them that blography and history don't always mix and that the drama here unfolded is one compounded of frustrations, misunderstandings, abortive ac-tions and ultimate tragedy despite all this, Barbara W. Tuchman's "Stilwell and the American Experience in China, 1911-45" is an impressive book. It is a return from the falling off of her last book. The Proud Tower, to the high level of The Guns of August." and fully deserves the wide an-dience it will doubtless win.

It seems to me to display Mrs. Tuchman's strongest tal-ent as a chromoler of great events, which is not so much to write vivid prose or to batten is often credited somewhat meeringly with doing but rather to organize her mate-rial coherently, to trace bright narrative threads without sacular history, to be sure, but it is popular history that doesn't conceal the voids beyond What she has done here is

quite simply to weld a blog-raphy of Gen. Joseph W. Skilwell onto a history of medern China because, as she explains in her foreword Stilwell "combined a career focused on China with background and character that were quintessentially American; because his connec-tion with Girins spanned the period that shaped the present from the dramatic opening moment of 1911, year of revolu-tion, to 1944, decisive year in the decities of the Nationalist government; because his serwice in the intervening years was a prising of the times—as language officer from 1920 to 1923 in the time of the warlords, as officer of the 15th Infantry in Tientsin from 1926 to 1929 at the time of life rise to power of Chiang Est-shek, as military attaché from 1935 to 1939 at the time of Japanese invesion, lastly as theater commander in World War II; cause in the final and critical years of this period he was the most important figure in the Sino American relation-ship." So she concludes, sim-ply to tell Stilwell's story is to focus on a key point in that relationship, And she is m-

There are other advantages as well. "Vinegar Joe" 5til-well was a complex and interesting man—a brilliant field commander greatly admired by his military associates and subordinates (one of the few men that George C. Marshall ad-dressed by his first name); bluntly outspoken, which work-American press but disas-trously to his disadvantage in matters of diplomacy; a main whose humility amounted almost to arrogance; and a peculiar blend of military courageousness and social timidity. And she has been the first under reb. 13.)

Digital Fatalism

WASHINGTON.—There is a certain kind of day during which you close a heavy drawer on your finger. It is possible to recognize this day almost immediately after rising. It

often begins with the discovery that there is no toothpaste. If there is toothpaste, your toothbrush may

fly out of your hand and disappear down the bathtub drain. Reaching for it,

Baker you crack your head ou the hot-water faucet and, staggering about in pain, knock a glass to the floor. It

At this moment it is obvious that this is that unspeakable day during which a drawer will be closed brutally on a finger. Nothing can be done to avoid it,

To compound the agony of waiting for the moment agony, there is the infuriating tendency of the general public to laugh about your plight. If, reaching out for sympathy, you confide to someone—"I'm going to have a finger mashed in a drawer before the day is outthe first response will be skep-

"How can you possibly know?"
"Oh, it always happens the same way. When I get up in the morning the toothpaste is gone, or sometimes I drop my toothbrush in my bathtub. Then I just miss my regular bus. The

Mardi Gras Fun Reigns in Rio

RIO DE JANEIRO, Feb. 23 (AP).—King Momo seized power yesterday and decreed that only fun shall reign for the next four days-carnival time in Rio.

The order was greeted with thumping samba drums and ebuffling feet in the streets, ballrooms and bars throughout this city of 4 1/2 million squeezed between the mountains and the seal

It all ends in the wee hours of Wednesday, the first day of the religious season of Lent.

By Russell Baker bus I finally get has a break-down. I hail a cab and get in, then discover that I've left my wallet at home. Later I have

> The recital is listened to with a broadening smile. The auditor, whose day is probably going swimmingly, may murmur some-thing such as, "You're just having one of those days," but his smile reflects the true state

my thumb mashed in a heavy

of his mind. "One of those days." What a callous way to put it. On such days we are too well aware of all the opportunities for disaster that have been designed into these ridiculous human bodies in which we walk around.

On such days, looking at fingers, we see with terrible clarity that it is inevitable that such things appended in such careless fashion to this long appendage so thoughtlessly attached to the shoulder will be trapped, and most painfully, in closing drawers.

The world thinks there is something funny about people who are embroiled in "oos of those days." A movie called "The Out-of-Towners" was made recently about a married couple whose trip to New York turned into "one of those days." The producers obviously thought it was comedy, for they cast Jack Lemmon in the lead.

The audience in the theater where I saw it accepted the producers' assumption and laughed agreeably, though the film was, in fact, a nightmare view of modern city life unrelieved by a ray of humor. One left the theater unutterably depressed about urban life and about the heartlessness of audiences who could laugh away two fellow humans caught in a collapsing world with the rationalization that they were merely having "one of those

On this day when your finger is crushed in a closing drawer, there comes a time just before the terrible moment when—it oever fails-the typewriter ribbon breaks and has to be replaced, as in fact has just occurred to this very typewriter ribbon. Now, we will need a new ribbon. Where did we put those typewriter ribbons? Ah yes, right here in this large, hard-to-open, heavy drawer....

...And a Generous Dash of Holy Terror

HAMBURG,-"No," Richard Brooks is bellowing. He bellows even better than his assistant, an alumnus of the Afrika Korps. "No, not now. BEFORE!" This might well be his motto.

Mr. Brooks, a distinguished writer-director whose words should be recorded exclusively in capital letters and exclama-tion points, is part football coach, part holy terror. "He scares a lot of people to death, until they see the twinkle," says his wife, the actress Jean Simmons, who has just flown in from Los Angeles and is drinking a can of beer on the assumption that it is midnight rather than 9 a.m. on a gray and snowy morning in the Hanseatic port of Hamburg.

A rapid and unflagging worker whose films come in under schedule and under budget, Mr. Brooks hates the tedium of film studios and has filmed oo locations from Cambodia ("Lord Jim") to Kansas Cold Blood"). Stocky and powerfully built, with close-cropped gray hair, he dresses in an all-purpose unseasonal outfit of billowing short-sleeved cotton shirt, faded blue cotton slacks and biking books. A green towel dangles from his left hip pocket.

He had that same towel in Cambodia," says Jean Simmons, in happy re-discovery. "It's amazing about Richard. You pick him up and put him down anywhere in the world, and he's the same."

Museum Trade

Mr. Brooks's film "\$" (pronounced dollars) sters Goldie Hawn, Warren Beatty and Gert Fröbe and will be made entirely in Hamburg where every sort of commerce thrives, from the notorious Resperbahn to the lumpish Kunsthalle museum which, in return for two art works. (a painting by David Hookney and a sculp-tural object by I. Angeles artist Robert Graham), has ; at an entire wing at Mr.

Offices, dressing rooms and a cutting room have been installed. The ground floor of the wing has been made into a bank, complete with cashiers cages, executive desks, closed circuit TV and buge photographs of affiliate banks. The basement has become a marvelously au-

thentio bank vault. "What is this picture about?" asks Mr. Brooks, who refuses to give out synopses. "It's about money!

"First of all, this is some bank, right? This isn't just a bank, it's a cathedral, it's the Sistine Chapel. The Sistine Chapel has its Michelangelos, we have them too. By Kodak." His eye wanders over the photographs of other imposing institutions. "Look at them-bank, bank, bank. Look at those pillars, they can hold up the world.

This picture is about money. Banks don't care whose money it is. There's

Richard Brooks

no such thing as dirty money—only the poor talk about dirty money—it all gets laundered here. All money is sweet. This is a cathedral where every soul can be saved, and from every soul more little souls will come.

Mary Blume

"You might think from what I've been saying." he says, leading the way back from the vaults, "that this is a solemn treatise on money. It's just a suspense picture. I hope it will be fun.".

Mr. Brooks, a Philadelphian who was a radio news commentator, marine and novelist before going to Hollywood, is in an unusually independent position for an American film-maker. He refuses to show anyone his dailies, will not allow one frame to be cut by anyone else the turned down a vast sum for the TV rights of "In Cold Blood" because the hanging scenes would have been cut and he does not let his actors see the script, preferring to give them just the next day's lines each evening. When Miss Simmons had a birthday during the filming of "The Happy Ending," in which she starred, the publicity man gave her a gorgeously wrapped package in which there was a fine folder printed "Script

for Jean Simmons." Inside were 180

Richard Brooks finds that not giving out the script not only works for him as a director but also protects him as a writer. When people get into a picture, they want to change the story to suit their personalities, he says. If they don't know the story, clearly they can't change it. "It's very difficult to be a cameraman

a gaffer, a key grip, an editor," he says, "but everyone can write. You just buy a pencil for six cents and you're a writer chanfleurs, psychiatrists, wives—they re ell writers.

"You're free in your work as long as you make money. When you don't, then the wives and chauffeurs come in with their pencils. When you make money, they think you have the key.

Privilege of Failure

"If a young man's first picture makes money, they give him everything he wants. If he fails, they take it sway. Both are wrong. The privilege of failure has been taken away in America. All they want is success, success, success, one after the other. And what is continual success? Mediocrity!"

Mr. Brooks isn't one to complain about financial pressures, reasoning that all artists are subject to them. Ten not comaring myself with Mozart or Beethoven but they'd get an order saying, please write a quartet for our party next week. Don't make it too loud because we're having funny people. And do it in all in 32 minutes because we want to play it between dessert and coffee. I'm not Mozart, but every artist has restrictions."

Back on the set, Mr. Brooks routinely bellows: "What the hell's going on here?" Then he settles into creating the atmo-sphere of swift-moving concentration that works so well for him. He hates the lunch break.—They come back with glaz-ed eyes and all momentum's lost"—and refuses to stop work himself.

Very little escapes his eye. While he is working out a scene with Mr. Probe, a charming man who does a marvelous impersonation of a German traffic cop under Hitler and under the American occupation, a German TV crew tries to film Miss Simmons at she sits on the sidelines, fighting a losing battle against jet lag.

"Tell them about your flight over," Mr. Brooks suggests sweetly. "Tell them about the earthquake." Nothing: "There was a young man from Madras/Whose things were constructed of glass," Mr. Brooks genteelly intones. Miss Simmons starts to laugh and the TV cameras whir. It's a take.

Carl Stadler didn't quite beat city hall but they did get the better of the New York City Transit Authority. Seems they refused to pay an additional 30-cent subway fare in December because they felt the service was had. TA policemen arrested them. Last week Judge Ken-neth Brown ruled they were right and dismissed all charges, saying that the TA failed to show that the people got the full services for which they were charged.

STILL FIGHTING: John

Beer of Casper, Wyoming, has filed an \$11,000 damage suit against the Olivetti Corp. of America, claiming he is being attacked and blackmailed by their billing computer. Beer, who owns an office machine firm in Casper, said the ha-rassment began three years ago when an Olivetti salesman took an adding machine from his company and sold it to a wholesale dealer in Montana. Beer said the salesman promised him either credit or payment for the machine. Then, Beer said, he started getting "nasty notes" from the Olivetti computer about a bill he owned them, but never received any payment for the adding machine. Beer said the computer is, in effect, blackmailing him because it would be easier to pay the machine than go through the courts to "de-fend justice. The only way you can beat a computer is to stick a succedirer through it."

LOSER: Rally-driver Pat Telford of Bournemouth, Eng-land, has driven thousands of miles in auto races, adding up to 20 years' experience behind the wheel Friday he falled his British driving test on a simple three-point turn. "Tm flabber-gasted," he said: "I had to take the test because Tve been out of Britain for ten years. But I never expected this.

Kathryn Thistlethwaite, 9, of

Atherton, England, summed up the problem for her parents this way: "Everyone else was on the first question of my exam. before I had finished writing my name." For the Thistlethwaites this was the last straw. Mrs. Harry. Thistlethwaite had found that no one in the neighberhood could pronounce her name properly. Harry found it bothersome in filling out forms. So they called a family conference and, agreeing that their last name was too much of a mouthful decided to change their

N.Y. Judge Finds Faul: With City's Subways

name by deed poll. They have now officially become the Baxters. "We chose the name because it is short and snappy," said the new Mr. Baxter.

Clarence Davis has a bar in Delcambre, Louisiana, and, for a while, had a rat—a rich one. Davis kept his cashbox beneath the counter. For 15 days the rat raided a little each day. Then, Davis noticed the corner of a ten-dollar bill sticking up through a crack in the floor-He pried op the board, and found \$460 lining a rat's nest, most of it in \$30 bills. That smart rat never did touch one check, Davis said.

Maxicoats make sense in Moscow, but fashion there keeps most hemlines at knee level, or above. One woman who is thankful for this is a theater cloakroom attendant who, after some fast mental calculations. said that she would hang up an extra ton of clothes every month if there were nothing but maxis on her racks. "But thanks to our producer, not many people come to the plays anyway."

BACK: Prince Charles and Princess Anne returned to England from a two-week holiday in Kenya and promptly went to spend the weekend with their mother, Queen Elizabeth II, at Windsor Castle. SEPARATED: Former Arkansas Gov. Winthrop Rockefeller and his wife Jeannette, who said they will be divorced. DIVORCED: Actor Rex Harrison, 63, and British film actress Rachel Roberts, in Santa Monica, Calif., after claiming irreconcilable differences. He will pay \$24,000 a year in alimony and provide her with a \$100,000 residence. PLAN-NING: Actress Jean Peters, wife of Howard Hughes, reportedly to wed movie executive Stanley Hough of Bollywood, if and when she divorces Hughes. Neither Miss Peters, 44, nor Hough, 50, would comment on the report. Hughes spokesman said the billionaire has "given his blessing" to the couple, but that no di-vorce had been obtained.

Half Billion Lost

CARSON CITY, Nev., Feb. 21 (UPI).-Gamblers dropoed more than a half billion dollars at Nevada's legalized casinos last year, an increase in 1970 of 10 percent over the previous year, the state gaming commission has reported.
